**Durability and Radiation Effects** Roger A. Assink,2008 The utilization of polymeric materials and their optimization for high performance applications requires a detailed understanding of their degradation sensitivities and the various features affecting durability This book provides an overview of the current trends in this research field Topics are the latest concepts related to material lifetime prediction methodologies new insight into degradation mechanisms in radiation environments and how the knowledge of degradation processes can be applied to the design of materials with improved performance Similarly of interest are appropriate analytical characterization techniques that are fundamental to all areas of polymer degradation and optimization studies This book discusses the overlapping performance interests in a range of existing and developing applications The audience will be polymer chemists and material engineers dealing with polymer design testing and durability issues The market will range from academia to large research institutes and industry Polymer Analysis and Degradation Alfonso Jimenez,Gennadii Efremovich Zaikov,2000 One of the most important features of the technical progress of this century has been deep and wide penetration of polymeric materials into all fields of human life But more than a half century of their use has revealed some shortcomings common to all of these materials Probably the most important of these is the tendency of most synthetic polymers to degradation Polymer degradation is in fact a series of chemical and physical transformations occurring in the polymer during service processing or storage which causes deterioration in valuable properties Many factors are responsible for polymer degradation including heat UV radiation biological agents and many others These factors either separately or together cause complex processes including cracking depolymerisation cross linking oxidation etc They may cause considerable and often quite rapid deterioration of polymer properties leading to a sharp decrease in their useful life This volume is organised to provide a wide coverage of new and traditional polymers and their behaviour during degradation as well as the important chemical and engineering aspects of these materials relative to processing and performance in various applications **Plenary and Invited Lectures Presented at the 2nd**

**International Symposium on Molecular Order and Mobility in Polymer Systems** ,1997 **Service Life Prediction** Jonathan W. Martin,2002 This is a comprehensive overview of recent progress in the development and application of modern service life prediction strategies to coatings and other polymeric materials Topics covered include the effects of weather variability novel light sources effects of acid precipitation and exposure angle on weathering new techniques for measuring time of wetness and methods for following the chemical and mechanical degradation of organic coatings and other polymeric materials There is also a section devoted to the understanding of degradation and stabilization processes as well as methods for manipulating the large amounts of data generated in service life studies *Polymers in Novel Applications* Ronald D.
