Polymers in Medicine II E. Chiellini, 2012-12-06 Polymers and polymer based composites have gained increasingly larger applications in medicine and surgery Presently most biomaterials applications rely on industrial substances that were initially developed by industry for non medical purposes Moreover polymers have been often used regardless of their peculiar characteristics which can be viceversa and very attractive for some specific applications In the past years we have assisted to a significative and faster development of polymer science as well as of medicine and surgery The assistance of computer aided apparatus the use of always more advanced instruments the larger interest of the academic and industrial world bring continuously new contributions to the research on biomedical and pharmaceutical use of polymers The need of a forum where these specific researchs can be presented and discussed and the success of the 1st Conference on Polymers in Medicine held in Porto Cervo in 1982 have encouraged the Editors to plan a periodical meeting focused on polymers and composites to be held every odd year This book contains papers selected by an International Scientific Committee among those presented at the 2nd International Conference on Polymers in Medicine Biomedical and Pharmaceutical Applications held in Capri Italy 3-7 June 1985 In addition to contributed papers several Authors were invited to present the state of the art as well as their personal contribution on specific key arguments The level of all contributions was high the participation well qualified and the meeting interesting and hopefully pleasant

Polymers in Medicine Emo Chiellini, Paolo Giusti, 2013-03-09 This book contains the collected papers presented at the International Symposium on Polymers in Medicine Biomedical and Pharmacological Applications which was held at Porto Cervo Italy May 24-28 1982 To the best of our knowledge this symposium was the first to be organized in Italy entirely devoted to the several aspects of the use of synthetic and semisynthetic macromolecular materials in the field of biomedical and pharmacological applications The intention of the Organizing Committee of the symposium was the promotion of a scientific and cultural initiative to gain the attention of various experts in line research of the potential of suitably designed man made polymeric materials in biomedical applications With highly qualified and worldwide attendance the above goal was fully satisfied Indeed the opportunity of meeting together in a well conceived and discreet corner of the world scientists with different cultural backgrounds and objectives helped extend the meaning of the symposium far beyond the Italian borders and the perspectives of the National Research Council of Italy CNR the major sponsor of the meeting

Developments in Ionic Polymers—2 A.D. Wilson,Prosser,2012-12-06 Ionic polymers like elephants are easier to recognise

than to define Several methods of classification have been attempted but none is wholly satisfactory because of the extreme diversity of ionic polymers which range from the organic water soluble polyelectrolytes through hydrogels and ionomer carboxylate rubbers to the almost infusible inorganic silicate minerals For this reason a general classification is not only difficult but has minimal utility However there are some characteristics of these materials that should be highlighted The role of counterions is the significant one These ions either singly or as clusters take part in the formation of ionic bonds which have a varying structural role Often they act as crosslinks but in the halato polymers the ionic bonds form an integral part of the polymer backbone itself Conversely in polymers containing covalent crosslinks such as the ion exchange resins the counterions have virtually no structural role to play since they dwell in cage like structures without affecting the crosslinking and are readily exchanged They are perhaps best described as ion containing polymers rather than structural ionic polymers Another crucial factor is the role of water in ionic polymers The presence of ionic bonds means that there is a tendency for these materials to interact with water Where the ionic polymer contains a high proportion of ionic units it acts as a hydrogel and may be highly soluble Such interactions with water decrease sharply as the ionic content is reduced though even then water can act as a plasticiser
