Lyn Miles, 1999-08-26 Research on the mental abilities of chimpanzees and bonobos has been widely celebrated and used in reconstructions of human evolution In contrast less attention has been paid to the abilities of gorillas and orangutans This 1999 volume aims to help complete the picture of hominoid cognition by bringing together the work on gorillas and orangutans and setting it in comparative perspective The introductory chapters set the evolutionary context for comparing cognition in gorillas and orangutans to that of chimpanzees bonobos and humans The remaining chapters focus primarily on the kinds and levels of intelligence displayed by orangutans and gorillas compared to other great apes including performances in the classic domains of tool use and tool making imitation self awareness social communication and symbol use All those wanting more information on the mental abilities of these sometimes neglected but important primates will find this book a treasure trove **Beauty and the Werewolf**

Povinelli,2000 From an early age humans know a surprising amount about basic physical principles such as gravity force mass and shape We can see this in the way that young children play and manipulate objects around them The same behavior has long been observed in primates chimpanzees have been shown to possess a remarkable ability to make and use simple tools But what does this tell us about their inner mental state do they therefore share the same understanding to that of a young child Do they understand the simple underlying physical principles involved Though some people would say that they do this book reports groundbreaking research that questions whether this really is the case Folk Physics for Apes challenges the assumptions so often made about apes It offers us a rare glimpse into the workings of another mind examining how apes perceive and understand the physical world an understanding that appears to be both similar to and yet profoundly different from our own The book will have broad appeal to evolutionary psychologists developmental psychologists and those interested in the sub disciplines of cognitive science philosophy anthropology The book additionally offers for developmental psychologists some valuable new non verbal techniques for assessing causal understanding in young children
