Wingerd, 1988 The Rat Thomas Arthur Goodwill Wells, 1968 **Anatomy and Histology of the Laboratory Rat in Toxicology and Biomedical Research** Robert L. Maynard, Noel Downes, 2019-02-08

Anatomy and Histology of the Laboratory Rat in Toxicology and Biomedical Research presents the detailed systematic anatomy of the rat with a focus on toxicological needs. Most large works dealing with the laboratory rat provide a chapter on anatomy but fall far short of the detailed account in this book which also focuses on the needs of toxicologists and others who use the rat as a laboratory animal. The book includes detailed guides on dissection methods and the location of specific tissues in specific organ systems. Crucially the book includes classic illustrations from Miss H G Q Rowett along with new color photo micrographs. Written by two of the top authors in their fields, this book can be used as a reference guide and teaching aid for students and researchers in toxicology. In addition, veterinary medical students, researchers who utilize animals in biomedical research, and researchers in zoology, comparative anatomy, physiology, and pharmacology will find this book to be a great resource. Illustrated with over a hundred black and white and color images to assist understanding. Contains detailed descriptions and explanations to accompany all images, helping with self study. Designed for toxicologic research for people from diverse backgrounds including biochemistry, pharmacology, physiology, immunology, and general biomedical sciences.

Atlas of Histology of the Juvenile Rat George A Parker, Catherine A. Picut, 2016-05-04

Atlas of Histology of the Juvenile Rat should be of interest to toxicologic pathologists, toxicologists, and other biological scientists who are interested in the histomorphology of juvenile rats. For several decades the laboratory rat has been used extensively in nonclinical toxicology studies designed to detect potential human toxicity of drugs, agrochemicals, industrial chemicals, and environmental hazards. These studies traditionally have involved young adult rats that are 8-10 weeks of age as studies are started. It is becoming increasingly apparent that children and young animals may have different responses to drug/chemical exposures; therefore, regulatory agencies are emphasizing toxicology studies in juvenile animals. While the histologic features of organs from young adult and aged laboratory rats are well known, less is known about the histologic features of organs from juvenile rats. Final histologic maturity of many organs is achieved postnatally; thus, immature histologic features must be distinguished from chemical or drug-related effects. While this postnatal organ development is known to exist as a general concept, detailed information regarding postnatal histologic development is not readily available. The Atlas includes organs that are typically sampled in nonclinical toxicology studies and presents the histologic features at weekly intervals starting at birth and extending through postnatal day 42. Written and edited by highly experienced board-certified toxicologic pathologists. Includes more than 700 high-resolution microscopic images from organs that are typically examined in safety assessment toxicology studies. Detailed figure legends and chapter narratives present the salient features of each organ at each time.

interval Figures are available for further study via Elsevier's Virtual Microscope which allows viewing of microscopic images at higher magnification Valuable resource for toxicologic pathologists who are confronted with interpretation of lesions in juvenile rats in situations where age matched concurrent controls are not available for comparison e.g. with unscheduled decedents Figures are available for further study on ScienceDirect with Virtual Microscope which allows viewing of microscopic images at higher magnification
