Patterns From Nature:

Patterns in Nature Philip Ball, 2020-03-04 The acclaimed science writer curates a visually striking riotously colorful photographic display of physical patterns in the natural world Publishers Weekly starred review Though at first glance the natural world may appear overwhelming in its diversity and complexity there are regularities running through it from the hexagons of a honeycomb to the spirals of a seashell and the branching veins of a leaf Revealing the order at the foundation of the seemingly chaotic natural world Patterns in Nature explores not only the math and science but also the beauty and artistry behind nature's awe inspiring designs Unlike the patterns we create natural patterns are formed spontaneously from the forces that act in the physical world Very often the same types of pattern and form such as spirals stripes branches and fractals recur in places that seem to have nothing in common as when the markings of a zebra mimic the ripples in windblown sand But many of these patterns can be described using the same mathematical and physical principles giving a surprising unity to the kaleidoscope of the natural world Richly illustrated with 250 color photographs and anchored by accessible and insightful chapters by esteemed science writer Philip Ball Patterns in Nature reveals the organization at work in vast and ancient forests powerful rivers massing clouds and coastlines carved out by the sea By exploring similarities such as the branches of a tree and those of a river network this spectacular visual tour conveys the wonder beauty and richness of natural pattern formation Forms and Patterns in Nature Wolf Strache, 1956 **Patterns in Nature [chart-large]**.
