

Rational Expectations Theory

- Some economists, such as John F. Muth ('Rational Expectations and the Theory of Price Movements' (1961)) and Robert Lucas, ('Expectations and the Neutrality of Money' (1972)), challenge the view of adaptive expectations. They argue that people can learn from past mistakes.
- As Lucas states in 1972 paper:

"The relationship, essentially a variant of the well-known Phillips curve, is derived within a framework from which all forms of 'money illusion' are rigorously excluded: all prices are market clearing, all agents behave optimally in light of their objectives and expectations, and expectations are formed optimally."

Rational Expectations Non Market Clearing And Investment Theory:

Rational Expectations, Non-market Clearing, and Investment Theory Mark Precious, 1987 This book examines investment theory in the light of rational expectations and disequilibrium theory the two major recent developments in macroeconomics It employs a neoclassical framework to offer a remedy for the two primary shortcomings of modern investment theory the almost exclusive focus on the demand side of the investment process and the lack of any coherent general framework capable of handling the study of investment when it is recognized that the markets in which firms operate may not clear continuously

Capital Formation in Belgium, 1900-1995 Michelangelo van Meerten, 2003 Based on the analysis of more than 35 000 company balance sheets annual series of gross private investment have been constructed for 15 different sectors in Belgium between 1900 and 1995 The resulting data clearly show that the level of gross investment in the Belgian economy expressed as a percentage of national income was generally much lower than during the post world war two period An international comparison demonstrates that Belgium usually invested far less than its major competitors Moreover the traditional coal and metal industries benefitted most of the investment effort instead of newer sectors like the chemical industry Thus the present study contributes to explaining for the relatively poor growth performances of the Belgian economy prior to the 1960s

Europe between East and South Siro Lombardini, Pier Carlo Padoan, 2012-12-06 At the end of 1991 the Fondazione Eni Enrico Mattei hosted the Integration Symposium of the Confederation of European Associations of Economists on Europe between East and South This volume brings together the selected and edited proceedings of the conference The focus of the book is the transformation of the formerly planned economies in Eastern and Central Europe from an international perspective The opening up of the Eastern bloc adds a new and extremely challenging dimension to the relationship between the more and the less developed economies Almost all developing countries implemented liberalisation policies throughout the Eighties thereby dramatically increasing the market orientation of their economies The recipes used in the South are also being applied virtually unmodified in Eastern Europe The symposium was one of the first forays comparing the two sets of experiences showing that the lessons from the South

are of great value for Eastern European reforms Reforms in Eastern European countries equally affect economic flows between Europe and developing countries and create new challenges for European countries themselves Eastern Europe is an enclave of cheap and relatively skilled labour thus a dramatic competitive threat for other developing countries and poorer EC regions Furthermore the strategic relevance of this area for the western world is likely to cause a diversion of public resources previously earmarked for the development of southern economies All these issues could have tremendous consequences for the environment

Journal of Banking & Finance ,1993 **Modeling Investment Behavior in Developing Countries** Nemat Shafik,1990 This model of investment behavior takes into account certain characteristics common to developing countries such as the oligopolistic structure of markets putty clay technology the inelastic supply of nontraded capital goods and financial repression

General Equilibrium, Capital and Macroeconomics Fabio Petri,2004 This book argues that the shift in general equilibrium theory from its early long period to the modern very short period versions has had very important consequences which are insufficiently appreciated by large parts of the economics profession This shift has produced new difficulties and has undermined central tenets of neoclassical macroeconomic theory such as the negative dependence of aggregate investment on the interest rate or the existence of a downward sloping demand curve for labour which had their basis in the long period versions where capital was treated as a single factor According to the author what makes it difficult to appreciate these consequences is the current imperfect grasp of the long period method an approach common to classical and to the first generations of neoclassical economists but nowadays often confused with steady growth analysis The origins of this problem date back to the 1930s and to this day still obscure the history and the logic of the neoclassical approach The book explains the analytical differences between long period steady growth and short period general equilibrium analyses and proves that on this basis considerable clarification can be achieved not only in many aspects of the history of economic theory but also in fundamental issues in the theories of value distribution capital investment employment and money For example the reasons for the disagreements in the Cambridge controversies over capital theory become very apparent This stimulating critique on the present state of economic theory will appeal to academics and researchers with an interest in macroeconomics the history of economic thought and the theory of value and distribution It will also enlighten and inform anyone wanting to understand the reasons behind the current dissatisfaction with neoclassical economics
