Re Engineering For Sustainable Industrial Production:

Re-engineering for Sustainable Industrial Production Luis M. Camarinha-Matos, 2013-03-09 In today's changing world enterprises need to survive in an ever volatile competitive market environment. Their success will depend on the strategies they practice and adopt. Every year new ideas and concepts are emerging in order for companies to become successful enterprises. Cross Border Enterprises is the new hot topic arising in the business process world at present. Many terms have been coined together and are being driven in the popular business press to describe this new strategy of conducting business: ie Extended Enterprise Browne et al 1995, O'Neill and Sackett 1994, Busby and Fan 1993, Caskey 1995, Virtual Enterprise Goldmann and Preiss 1991, Parunak 1994, Goranson 1995, Doumeingts et al 1995, Seamless Enterprise Harrington 1995, Inter Enterprise Networking Browne et al 1993, Dynamic Enterprise Weston 1996 and so on. Many people have argued that they mean the same thing just using different words. Others feel they are different. But how different are they? In this paper the authors will present some basic lines required from this new strategy for conducting and coordinating distributed business processes. DBP as well as trying to clarify the particularities of two of the widest spread terms related to it: Virtual and Extended Enterprise. 2 CLUSTERS OF PRESSURES The business world currently faces an increased trend towards globalisation, environmentally benign production and customisation of products and processes, forcing individual enterprises to work together across the value chain in order to cope with market influences. *Re-Engineering for Sustainable Industrial Production* Luis M. Collaborative Networks for a Sustainable World Luis M. Camarinha-Matos, Xavier Boucher, Hamideh Afsarmanesh, 2010-09-21 Collaborative Networks for a Sustainable World. Aiming to reach a sustainable world calls for a wider collaboration among multiple stakeholders from different origins as the changes needed for sustainability exceed the capacity and capability of any individual actor. In recent years there has been a growing awareness both in the political sphere and in civil society including the business sectors on the importance of sustainability. Therefore this is an important and timely research issue not only in terms of systems design but also as an effort to bring and integrate contributions from different disciplines when designing and organising those systems. The discipline of collaborative networks, especially which has already emerged in many application sectors, shall play a key role in the implementation of effective sustainability strategies. PRO-VE 2010 focused on sharing knowledge and experiences as well as identifying directions for further research and development in this area. The conference discussed models, infrastructures, support tools and governance principles developed for collaborative networks as important resources to support multi-stakeholder sustainable developments. Furthermore the challenges of this theme open new research directions for CNs. PRO-VE 2010 held in St. **The**
