

The Brooklyn Bridge

John Roebling, an engineer, created a bridge that would span the East River connecting Manhattan Island and Brooklyn in the 1850s. Back then, long bridges were often supported by a number of strong pillars. But such a bridge would prevent ships from passing. Roebling desired to construct an aerial suspension bridge. The bridge would be supported by thick cables hung from two towers. Ships could navigate underneath. Roebling struggled to convince people that the bridge would be secure. Compared to existing suspension bridges, it would be significantly longer. Roebling's proposals were finally accepted in 1869. But just as the work was starting, he passed away abruptly. Washington Roebling, his son, took over. Men labored in caissons, which are chambers deep underwater. We now understand that divers who work at great depths must ascend gradually to give their bodies time to acclimate to the difference in pressure. But none understood the illness's origins at the time. Towers were built, rising 276 feet above the lake. The towers were then connected to by tens of thousands of thin steel cables that were extended from Brooklyn to Manhattan. Four major cables, each measuring about 16 inches in thickness, were created by wrapping bundles of wire together. The Brooklyn Bridge ultimately opened in 1883, after 14 trying years. The bridge was not only a magnificent engineering achievement, but it was also a stunning sight.
