

A Patient's Guide to Getting Medicine Through a Feeding Tube

Getting the nutrition you need through a feeding tube can improve quality of life. Frequently, the tube is also used for giving medicine. Here are some general tips and specific information about a few common medicines that you may find helpful. You should consult your pharmacist, physician, dietitian or nurse for specific information about the medication that you take.

Giving medications through feeding tube

- Medicines may clog a feeding tube. Follow these guidelines to decrease the chance of a clog and to get the most benefit from your medicine.
- Use a syringe to give diluted medications through the feeding tube.
- Never mix medication with tube feeding formula.
- Never mix medications together unless your doctor advises you differently.
- Do not crush time-released medications or enteric-coated medications. The letters CD, CR, CRT, LA, SA, SR, TR, XL, or XR usually indicate time release medications. The words Chronotab, Duratab, Extentab, Gradumet, Repetab, Sequel, Spansule, Tembidi, Timexcap, or Timespan also indicate time release. The letters EC stands for enteric coated.
- Only some sublingual medicine, medicine that is absorbed from the cheeks or lozenge type medicine may be suitable to go through a feeding tube, check first.
- Ask your doctor where the tip of the feeding tube resides. This is important for drug administration. The stomach can tolerate more drugs than areas in the intestine, jejunum or duodenum.
- Use liquid medications when possible, but these may need to be diluted (1 part medicine to 4–5 parts water) before infusing to avoid stomach upset or diarrhea. If the tip of the tube is past the stomach, dilute with 8 to 10 parts water.
- Many liquid medications are thick and cling to feeding tube walls. Rinse well before and after to prevent this from happening.
- Crush tablets to a fine powder and mix well in 10 to 15 ml of warm water. If the tip of the tube is past the stomach, dilute with 20 to 30 ml of water. Let the mixture sit for two minutes prior to putting it down the tube and mix again before giving the medicine.
- Clear feeding tube by rinsing with 1–2 Tablespoonfuls (20 to 30ml) of warm water before and after each medication.
- Ask your doctor or pharmacist if the medication needs to be given on a full or empty stomach. This is only important if you are giving yourself tube feedings several times a day using a syringe as a funnel (bolus). Then consider the tube feeding to be a meal.
