Ratner's Theorems On Unipotent Flows:

Ratner's Theorems on Unipotent Flows Dave Witte Morris, 2005-08-15 The theorems of Berkeley mathematician Marina Ratner have guided key advances in the understanding of dynamical systems. Unipotent flows are well behaved dynamical systems and Ratner has shown that the closure of every orbit for such a flow is of a simple algebraic or geometric form. In *Ratner's Theorems on Unipotent Flows* Dave Witte Morris provides both an elementary introduction to these theorems and an account of the proof of Ratner's measure classification theorem. A collection of lecture notes aimed at graduate students, the first four chapters of *Ratner's Theorems on Unipotent Flows* can be read independently. The first chapter, intended for a fairly general audience, provides an introduction with examples that illustrate the theorems, some of their applications, and the main ideas involved in the proof. In the following chapters, Morris introduces entropy, ergodic theory, and the theory of algebraic groups. The book concludes with a proof of the measure theoretic version of Ratner's Theorem. With new material that has never before been published in book form, *Ratner's Theorems on Unipotent Flows* helps bring these important theorems to a broader mathematical readership. , *Ergodic Theory and Its Connection with Harmonic Analysis* Karl Endel Petersen, 1995 Tutorial survey papers on important areas of ergodic theory with related research papers.

Equidistribution in Number Theory, An Introduction Andrew Granville, Zeev Rudnick, 2007-04-08 From July 11th to July 22nd 2005 a NATO advanced study institute as part of the series *Seminaire de mathematiques superieures* was held at the Université de Montreal on the subject *Equidistribution in the theory of numbers*. There were about one hundred participants from sixteen countries around the world. This volume presents details of the lecture series that were given at the school. Across the broad panorama of topics that constitute modern number theory, one finds shifts of attention and focus as more is understood and better questions are formulated. Over the last decade or so we have noticed increasing interest being paid to distribution problems, whether of rational points, of zeros of zeta functions, of eigenvalues, etc. Although these problems have been motivated from very different perspectives, one finds that there is much in common and presumably it is healthy to try to view such questions as part of a bigger subject. It is for this reason we decided to hold a school on *Equidistribution in number theory* to introduce junior researchers to these beautiful questions and to determine whether different approaches can influence one another. There are far more good problems than we had time for in our schedule. We thus decided to focus on topics that are clearly inter-related or do not require a lot of background to understand.

highlights of the Congress *Handbook of Dynamical Systems* B. Hasselblatt, A. Katok, 2002-08-20 Volumes 1A and 1B These volumes give a comprehensive survey of dynamics written by specialists in the various subfields of dynamical systems The presentation attains coherence through a major introductory survey by the editors that organizes the entire subject and by ample cross references between individual surveys The volumes are a valuable resource for dynamicists seeking to acquaint themselves with other specialties in the field and to mathematicians active in other branches of mathematics who wish to learn about contemporary ideas and results dynamics Assuming only general mathematical knowledge the surveys lead the reader towards the current state of research in dynamics Volume 1B will appear 2005 *Structure and Randomness* Terence Tao, In 2007 Terry Tao began a mathematical blog as an outgrowth of his own website at UCLA This book is based on a selection of articles from the first year of that blog These articles discuss a wide range of mathematics and its applications ranging from expository articles on quantum mechanics Einstein's equation $E=mc^2$ or compressed sensing to open problems in analysis combinatorics geometry number theory and algebra to lecture series on random matrices Fourier analysis or the dichotomy between structure and randomness that is present in many subfields of mathematics to more philosophical discussions on such topics as the interplay between finitary and infinitary in analysis Some selected commentary from readers of the blog has also been included at the end of each article Invariant Submanifolds for Homogeneous Flows on Quotients of Semisimple Lie Groups of Noncompact Type Tracy Lin Payne, 1995 *Russian Mathematical Surveys*, 1997 *Pure and Applied Mathematics Quarterly*, 2008 **Mathematical Reviews**, 2006 *Nontrivial Time-changes of Unipotent Flows on Quotients of Lorentz Groups* Siyuan Tang (Mathematician), 2022 In a series of papers Ratner proved a deep theorem asserting that the orbits of any one parameter unipotent flows are well behaved they are either closed or are dense in some homogeneous space of finite volume Moreover the probability measure which is invariant and ergodic under the unipotent flow must be the Haar measure on some homogeneous space In particular we can conclude from Ratner's theorem that the measurable conjugacy between two unipotent flows is affine A natural problem is whether we can similarly obtain the rigidity of perturbations of unipotent flows Perhaps the simplest perturbations are time changes that is the flows that move points along the same orbits but with different speeds The problem was first studied by Ratner who focused on horocycle flows and realized that it is related to the cohomological equations In this thesis we show that there are certain cocompact lattices so that there are time changes of unipotent flows on the quotient of Lorentz groups $SO(n, 1)$ that are not measurably conjugate to the unperturbed ones Moreover we show that these time changes are disjoint from the unperturbed flows in the sense of Furstenberg More precisely in Chapter 2 we extend the works of Ratner to the case $SO(n, 1)$ via a detailed study on the centralizer of unipotent flows Then in Chapter 3 combining a stronger version of the branching of the complementary and Flaminio-Forni argument we are able to provide certain cocompact lattices and time changes on the corresponding homogeneous spaces to reach our purpose The method
