## Reaction Diffusion Computers:

*Reaction-Diffusion Computers* Andrew Adamatzky, Benjamin De Lacy Costello, Tetsuya Asai, 2005-10-05 The book introduces a hot topic of novel and emerging computing paradigms and architectures computation by travelling waves in reaction diffusion media A reaction diffusion computer is a massively parallel computing device where the micro volumes of the chemical medium act as elementary few bit processors and chemical species diffuse and react in parallel In the reaction diffusion computer both the data and the results of the computation are encoded as concentration profiles of the reagents or local disturbances of concentrations whilst the computation per se is performed via the spreading and interaction of waves caused by the local disturbances The monograph brings together results of a decade long study into designing experimental and simulated prototypes of reaction diffusion computing devices for image processing path planning robot navigation computational geometry logics and artificial intelligence The book is unique because it gives a comprehensive presentation of the theoretical and experimental foundations and cutting edge computation techniques chemical laboratory experimental setups and hardware implementation technology employed in the development of novel nature inspired computing devices Key Features Non classical and fresh approach to theory of computation In depth exploration of novel and emerging paradigms of nature inspired computing Simple to understand cellular automata models will help readers students to design their own computational experiments to advance ideas and concepts described in the book Detailed description of receipts and experimental setups of chemical laboratory reaction diffusion processors will make the book an invaluable resource in practical studies of non classical and nature inspired computing architectures Step by step explanations of VLSI reaction diffusion circuits will help students to design their own types of wave based processors Key Features Non classical and fresh approach to theory of computation In depth exploration of novel and emerging paradigms of nature inspired computing Simple to understand cellular automata models will help readers students to design their own computational experiments to advance ideas and concepts described in the book Detailed description of receipts and experimental setups of chemical laboratory reaction diffusion processors will make the book an invaluable resource in practical studies of non classical and nature inspired computing architectures Step by step explanations of VLSI reaction diffusion circuits will help students to design their own types of wave based processors

*Physarum Machines: Computers From Slime Mould* Andrew Adamatzky, 2010-08-26 A Physarum machine is a programmable amorphous biological computer experimentally implemented in the vegetative state of true slime mould Physarum polycephalum It comprises an amorphous yellowish mass with networks of protoplasmic veins programmed by spatial configurations of attracting and repelling gradients This book demonstrates how to create experimental Physarum machines for computational geometry and optimization distributed manipulation and transportation and general purpose computation Being very cheap to make and easy to maintain the machine also functions on a wide range of substrates and in a broad scope of environmental conditions As such a Physarum machine is a green and

environmentally friendly unconventional computer The book is readily accessible to a nonprofessional reader and is a priceless source of experimental tips and inventive theoretical ideas for anyone who is inspired by novel and emerging non silicon computers and robots

*Computing in Nonlinear Media and Automata Collectives* Andrew Adamatzky, 2001-06-22 Computing in Nonlinear Media and Automata Collectives presents an account of new ways to design massively parallel computing devices in advanced mathematical models such as cellular automata and lattice swarms from unconventional materials including chemical solutions bio polymers and excitable media

**Behaviourism in Studying Swarms: Logical Models of Sensing and Motoring** Andrew Schumann, 2018-05-25 This book presents fundamental theoretical results for designing object oriented programming languages for controlling swarms It studies the logics of swarm behaviours According to behaviourism all behaviours can be controlled or even managed by stimuli in the

environment attractants motivational reinforcement and repellents motivational punishment At the same time there are two main stages in reactions to stimuli sensing perceiving signals and motoring appropriate direct reactions to signals This book examines the strict limits of behaviourism from the point of view of symbolic logic and algebraic mathematics how far can animal behaviours be controlled by the topology of stimuli On the one hand we can try to design reversible logic gates in which the number of inputs is the same as the number of outputs In this case the behaviouristic stimuli are inputs in swarm computing and appropriate reactions at the motoring stage are its outputs On the other hand the problem is that even at the sensing stage each unicellular organism can be regarded as a logic gate in which the number of outputs means of perceiving signals greatly exceeds the number of inputs signals
