ABSTRACT

The spatial-numerical association of response codes (SNARC) refers to the faster left-hand responses to smaller numbers and faster right-hand responses to larger numbers. Although easily replicable in Western cultures, the prevalence of the SNARC effect in other cultures has long been an issue. In the current study, we aimed to replicate the SNARC effect in a parity judgement task with Turkish participants ($N = 66$) whose reading habits are entirely left-to-right. The results revealed no SNARC effect. To the best of our knowledge, this is the first finding indicating the absence of regular SNARC effect among left-to-right readers in a classical parity judgement task. Based on these findings, we suggest that investigations of cultural influences on spatial-numerical associations should take a broader perspective rather than only focusing on reading habits.

INTRODUCTION

The cognitive representation of numbers is typically associated with space. The spatial-numerical associations (SNAs) have been demonstrated through various behavioral tasks (see Trope & Liberman, 2010, for a recent review). For instance, Fischer (2001) reported that participants showed a leftward bias when bisecting strings consisted of small digits (i.e., 1 and 2) and a rightward bias when the strings consisted of large digits (i.e., 8 and 9; see also Calabria & Rossetti, 2005). Furthermore, Fischer et al. (2003) found that passive exposure to small and large numbers in a simple detection task might lead participants' attention to the left and right visual field, respectively (but see also Pellegrino et al., 2019). A similar bias was observed in a random number generation task by Loetscher et al. (2008). Participants generated smaller numbers when turning their heads to the left and larger numbers when turning to the right.

One of the most extensively investigated SNA is the spatial-numerical association of response codes (SNARC) effect, which is often evidenced by, respectively, faster left/right responses to smaller/larger digits in a binary classification task on the parity status of a centrally presented number (Dehaene et al., 1993). The magnitude in a parity judgement task seems irrelevant, but it interferes with the responses, presumably due to automatic magnitude processing. Dehaene et al. (1993) suggested that the SNARC effect could result from the left-to-right direction of the mental number line (MNL; Rasmussen, 1970), in which the semantic memory of numbers is mapped on a spatial continuum. The SNARC effect has been well-established in a wide range of tasks (e.g., magnitude classification, Dehaene et al., 1990; phoneme detection, Fias et al., 1996; font detection, Notebaert et al., 2006), experimental settings (e.g., foot responses, Schwarz & Möller, 2006),

oculomotor responses, Fischer et al., 2004; pointing responses, Fischer, 2003), and numerical modalities (e.g., number words, Fias, 2001; auditory number words and dot patterns, Noerk et al., 2005; sign language numbers in deaf signers, Chinello et al., 2012).

Perhaps the most remarkable characteristic of the SNARC effect is its situational nature (for a review, see Cipora et al., 2018). In line with this, Fias et al. (1996) demonstrated that faster right-hand responses were associated with digits 4 and 5 placed in the numerical range of 0–5, but in the range of 4–9, the same digits elicited faster left-hand responses. Also, when Richbold et al. (1998) asked participants to imagine the digits on a clock face (with smaller numbers on the right and larger numbers on the left), they observed a reversed SNARC effect (faster left-hand responses for large and faster right-hand responses for small numbers). Furthermore, different tasks induce different patterns of the SNARC effect. More specifically, although a linear pattern of the SNARC effect is observed during parity judgement tasks, the magnitude classification task elicits a categorical shape, possibly due to direct (during magnitude classification) and indirect (during parity judgement) activation of the MNL based on task requirements (Cipora et al., 2008; Wood et al., 2008). In fact, the situational dependency of the SNARC effect can further interact with the task demands, and therefore, yield different results for parity judgement and magnitude classification tasks (e.g., Mingolo et al., 2021). In line with this, the SNARC effect in parity judgement disappears under verbal working memory load,

Reader feedback in text design Menno de Jong, 2022-06-08 Brochures play a significant role in governmental public information provision Every year many brochures are distributed to inform instruct or persuade people These brochures may benefit from a systematic design process including applied research such as pretesting Among communication professionals the importance of pretesting is practically undisputed Readers from the target audience are assumed to provide valuable insights into whether a document really works Organizations therefore increasingly try to include a pretest in the design process of important documents Various pretest methods have been developed and are being used in practice However little is known yet about the merits and restrictions of the available approaches This book provides a framework for scholarly research into pretesting and presents a series of studies into the validity of one particular pretest instrument a combination of the plus minus method and a semi structured questionnaire This is one of the prevailing pretest approaches in the Dutch public information sector The validity of the pretest instrument is assessed in two complementary ways First the question is addressed as to whether a revision on the basis of pretest results actually leads to an improvement in the functional quality of brochures Second a study is presented in which text and subject matter experts judge the importance of pretest results The pretest instrument appears to yield a large amount and a great variety of reader feedback which in a subsequent revision may contribute to significant improvements in the effectiveness of brochures

and the epistemic strategy of narrating dementia the respective narrative modes come with different prerequisites and possibilities for narrating dementia The analysis of four contemporary Anglophone dementia fictions based on the developed model reveals their potential functions Fiction allows readers to learn about the challenges of dementia grants them perspective taking it trains cognitive flexibility and explores the meaning of memory knowledge narrative and imagination and thus also offers trajectories of a cultural coping with dementia
