Sex And Longevity Sexuality Gender Reproduction Parenthood:

Sex and Longevity: Sexuality, Gender, Reproduction, Parenthood J.-M. Robine, T.B.L. Kirkwood, M. Allard, 2012-12-06 A central concept in the evolutionary theory of senescence is the idea that ageing results from life history trade offs In particular the disposable soma theory suggests that longevity is determined through the setting of longevity assurance mechanisms so as to provide an optimal compromise between investments in somatic maintenance including stress resistance and in reproduction Comparative studies among mammalian species confirm that cells from long lived species appear to have a greater intrinsic capacity to withstand stresses than cells from short lived species Childbearing at older ages has become increasingly common in modern societies because of demographic changes medical progress and personal choice While the detrimental effects of late reproduction on infant mortality and genetic diseases have been well documented little is known about the possible postponed detrimental effects of late parenting **Gerontologie** Wolf D. Finch, Jean-Marie Robine, 2013-12-21 In this third volume on longevity Fondation Ipsen has again collected the most recent results in research on genes and diet in the evolution of human longevity educational level and longevity cognitive impairment and survival at older age and other contributions The preponderance of relatively short compared to long lived organisms suggests that morphogenesis is easier to accomplish than is maintenance of soma whereas the broad range of longevity of organisms demonstrates that maintaining soma for extended periods of time is possible The underlying assumption of disposable soma theory of aging is that the expense of maintaining somatic cells depends on their contribution to the welfare of the germ cells *Health Expectations for Older Women* Sarah B. Laditka, 2014-06-11 Explore international trends in health and longevity with a special focus on older women This essential book examines the latest research on life expectancy and active life expectancy the number of years that women can expect to live free from major disability in developed and developing countries around the world It also explores the policy implications of the contributors findings Here you will find a global study using data from the World Health Organization a European study using data from OECD countries and studies of women in the United
