**Age of Auto Electric** Matthew N. Eisler, 2022-12-06 The electric vehicle revival reflects negotiations between public policy which promotes clean fuel efficient vehicles and the auto industry which promotes high performance vehicles Electric cars were once as numerous as internal combustion engine cars before all but vanishing from American roads around World War I Now we are in the midst of an electric vehicle revival and the goal for a sustainable car seems to be within reach In Age of Auto Electric Matthew N Eisler

shows that the halting development of the electric car in the intervening decades was a consequence of tensions between environmental energy and economic policy imperatives that informed a protracted reappraisal of the automobile system. These factors drove the electric vehicle revival, argues Eisler, hastening automaking's transformation into a science-based industry in the process. Challenging the common assumption that the electric vehicle revival is due to the development of better batteries, *Age of Auto Electric* instead focuses on changing environmental and socioeconomic conditions, energy and environmental policies, systems of energy conversion and industrial production, and innovation practices that affected the prevalence and popularity of electric vehicles in recent decades. Eisler describes a world in transition from legacy to alternative energy conversion systems and the promises, compromises, new problems, and unintended consequences that enterprise has entailed. *The Global Rise of the Modern Plug-In Electric Vehicle* John D. Graham, 2021-04-30. We may be standing on the precipice of a revolution in propulsion not seen since the internal combustion engine replaced the horse and buggy. The anticipated proliferation of electric cars will influence the daily lives of motorists, the economies of different countries, and regions, urban air quality, and global climate change. If you want to understand how quickly the transition is likely to occur and the factors that will influence the predictions of the pace of the transition, this book will be an illuminating read.

**Non-Petroleum Automotive Transportation** Carl Arthur MacCarley, 2025-07-17. Non-Petroleum Automotive Transportation addresses the broad topic of energy and environmental sustainability for automotive transportation in a balanced, comprehensive, and readable way. Readers will gain a basic understanding of the characteristics, advantages, and limitations of all viable alternatives to fossil fuels, as well as the basics of internal combustion engines. Fuels include ethanol, methanol, hydrogen, biodiesel, biomethane, natural gas, ammonia, dimethyl ether, and synthetic e-fuels, and methods to calculate the carbon emissions and power output limits for each are covered. The technologies' operation efficiency and overall emissions of battery electric, hybrid electric, and hydrogen fuel cell vehicles will be analyzed and compared with all other vehicle fueling options. Also covered are the fueling and charging infrastructure challenges, energy resource requirements, indirect environmental impacts, safety, and economic ramifications of the transition from gasoline and diesel fuel to electric and renewable fuels. The interdependence of transportation with solar, wind, electric energy storage, and emerging renewable energy sources is discussed. The book concludes with an overview of the effect of incentives and carbon credits on the direction of automotive energy and suggestions for future career and investment opportunities enabled by this revolution.
