A guide to owning an Electric Vehicle

The electric vehicle market is booming, with many people making the switch from petrol or diesel vehicles to electric and hybrid models. As the number of electric vehicle models widens, the driving range improves and prices drop making them more attractive, there are a variety of benefits for drivers making the switch. From the environmental impact to the savings you can make on fuel, tax and maintenance costs. This guide will identify some of the benefits of making the switch to electric and provide information on how you can ensure you are getting the most out of your electric vehicle.

THE BENEFITS OF SWITCHING TO ELECTRIC

Zero tailpipe emissions - by owning an electric vehicle you are helping to reduce pollution by emitting fewer greenhouse gasses and air pollutants (according to EDF Energy just 1 electric car on the roads can save an average of 1.5 million grams of CO2*), and with an increasing number of electric vehicle energy tariffs available you can charge your vehicle up knowing that the energy used is renewable too - win/win!

Lower running costs - electricity is still cheaper than fuel, so running an electric vehicle works out cheaper. It also has fewer mechanical parts meaning less can go wrong and repair costs are usually lower than a petrol or diesel car. There are tax benefits too - road tax for purely electric cars is currently £0. Some places offer free parking for electric vehicles too - worth looking out for!

Silence - Electric Vehicles are quiet - with no piston or engines moving at great speeds, electric vehicles are pretty much silent. You may notice wind and tyre noise but this is no louder than a conventional car it's just not being masked by the engine noise. Enjoy the peace and quiet!

Instant power - because there are no gears, electric vehicles are very efficient at delivering power to the motor and wheels and acceleration happens pretty much instantly.

Simple driving - there are no gears (well not in the traditional sense) - they have Drive (or Forwards) and Reverse - it's that simple!

Regenerative braking - when you lift your foot off the accelerator the car will begin to slow down using the friction in the braking system and returning some charge to the battery as it does so. On most electric vehicles, this feature can be adjusted or turned off if you don't like it!

Government grants - it is worth checking to see if you qualify for any of the Government grants or schemes that are in place to help people make the switch.

The Guide to Electric, Hybrid & Fuel-Efficient Cars Jacques Duval, Daniel Breton, 2016-06-28 Passionate about sustainable development Introducing the world's first guide to electric cars In the first edition of what promises to be the new bestseller in the world of cars our authors explain the latest on electric vehicles Speaking to amateurs and more seasoned enthusiasts alike our two experts answer all your questions how do you recharge and service an electric vehicle Are electric cars built for North American winters Can you even drive on electricity every day of the week Do you really save money when you go electric Do electric vehicles have the speed you need Would a hydrogen car be a wiser choice Are the batteries in electric cars harmful to the environment are they dangerous like the oil companies say Does the government chip in when you buy an electric vehicle Jacques Duval and Daniel Breton have tested over 70 different models that are on the market now or will be in a matter of months They get down to the nitty gritty with in depth commentary from page one Learn all there is to know about tech features pricing energy consumption stats greenhouse gas emissions and pollutants Just fifteen years ago electric cars were a novelty now they're becoming increasingly central to the automobile industry Soon the entire world will turn to this eco friendly mode of transportation *The Electric Car Guide - G-Wiz* Michael Boxwell, 2010-10 This is a book about the the fun quirky unusual and lovable G Wiz Love it or loath it the G Wiz is a revolutionary vehicle It runs on electricity and not fossil fuels It emits no pollution and travels in silence In short it's a car that rewrites the rule book This book is for anyone who is interested in owning a G Wiz If you want to know what these cars are like to own use and live with on a day to day basis this book will put you in the picture *The Electric Car Guide: Nissan Leaf* Michael Boxwell, 2015-04-20 Arguably one of the most important cars of this century so far the Nissan LEAF is one of the most talked about cars in the world It is the world's best selling electric car a former World Car of the Year winner and one of the most environmentally friendly cars you can buy today In this all new guide best selling technology author and LEAF owner Michael Boxwell explains what you need to know about owning and using a LEAF He reveals why driving electric is not just good for the environment but provides a terrific driving experience that is good for your wallet as well Michael Boxwell has been involved in the electric vehicle industry since 2003 and has owned and driven electric cars since 2006 He is currently on his second Nissan LEAF *Solar Powered Charging Infrastructure for Electric Vehicles* Larry E. Erickson, Jessica Robinson, Gary Brase, Jackson Cutsor, 2016-10-14 The Paris Agreement on Climate Change adopted on December 12 2015 is a voluntary effort to reduce greenhouse gas emissions In order to reach the goals of this agreement there is a need to generate electricity without greenhouse gas emissions and to electrify transportation An infrastructure of SPCSs can help accomplish both of these transitions Globally expenditures associated with the generation transmission and use of electricity are more than one trillion dollars per year Annual transportation expenditures are also more than one trillion dollars per year Almost everyone will be impacted by these changes in transportation solar power generation and smart grid developments The

benefits of reducing greenhouse gas emissions will differ with location but all will be impacted This book is about the benefits associated with adding solar panels to parking lots to generate electricity reduce greenhouse gas emissions and provide shade and shelter from rain and snow The electricity can flow into the power grid or be used to charge electric vehicles EVs Solar powered charging stations SPCSs are already in many parking lots in many countries of the world The prices of solar panels have decreased recently and about 30% of the new U S electrical generating capacity in 2015 was from solar energy More than one million EVs are in service in 2016 and there are significant benefits associated with a convenient charging infrastructure of SPCSs to support transportation with electric vehicles Solar Powered Charging Infrastructure for Electric Vehicles A Sustainable Development aims to share information on pathways from our present situation to a world with a more sustainable transportation system with EVs SPCSs a modernized smart power grid with energy storage reduced greenhouse gas emissions and better urban air quality Covering 200 million parking spaces with solar panels can generate about 1.4 of the electricity that was generated in 2014 in the United States Millions of EVs with 20 to 50 kWh of battery storage can help with the transition to wind and solar power generation through owners responding to time of use prices Written for all audiences high school and college teachers and students those in industry and government and those involved in community issues will benefit by learning more about the topics addressed in the book Those working with electrical power and transportation who will be in the middle of the transition will want to learn about all of the challenges and developments that are addressed here

[Plug-in Vehicles, Plugged in Policy?](#) Great Britain: Parliament: House of Commons: Transport Committee, 2012-09-20 Consumer demand for plug in vehicles remains very low and the Government grant to encourage demand may not be proving effective The Government must do more to show that its plug in vehicle strategy is a good use of public money Carbon emissions from transport must be reduced if the UK is to meet

its climate change targets but public money must be targeted on effective policies So far Department for Transport expenditure on plug in cars some 11 million has benefited just a handful of motorists There is a risk that the Government is basically subsidising second cars for affluent households It is also unclear whether the provision of public charging infrastructure encourages demand for plug in cars Indeed the Government does not even have a register of all the chargepoints installed at public expense
