Netzintegration der Elektromobilität 2018 Johannes Liebl, 2018-10-30 Die inhaltlichen Schwerpunkte des Tagungsbands zur ATZlive Veranstaltung Netzintegration der Elektromobilität 2018 sind u.a. folgende Fragen: Wann können Stromnetze volatile Wind und Solarenergie speichern? Wie sind die Stromübertragungsnetze ausgelegt? Können Spitzenlastsituationen abgedeckt werden? Die Tagung ist eine unverzichtbare Plattform für den Wissens- und Gedankenaustausch von Forschern und Entwicklern aller Unternehmen und Institutionen, die Antworten auf diese Fragen suchen. Climate Change and Clean Energy Management Henry Wang, 2019-10-22 Climate change has never been more important than it is now as it has become arguably the world's most urgent problem. Solving this problem is proving difficult and complex as it involves joint efforts by governments, companies, communities, and innovators. The increased use of fossil fuels associated with global economic growths has led to rising GHG emissions and global warming. There are many challenges for countries that are enacting new climate and clean energy regulations in line with their Paris Agreement commitments. Good government policies and corporate strategies are essential to support these efforts as part of the global climate change crisis. This important book addresses the latest climate change impacts and developments in potential mitigation strategies. These include fossil to clean energy transition, smart low carbon city designs, green transportation, electric vehicles, green agriculture, carbon emission trading, carbon capture solutions, plus climate finance and risk management. Potential new policies and strategies to support the successful implementation of these important strategic areas are discussed together with high-level country and business case examples. This book is essential reading for policy makers, government employees, business executives, professionals, researchers, and academics alike looking to affect change to global climate and energy policies. **Strategic Management and Sustainability Transitions** Michael Zhang, 2023-12-01 The subject of sustainability transitions has in the past decade or so become an established research field for academics, policy makers, and practitioners alike. Conceptual and theoretical developments in the field have gradually advanced from the perspectives of socio-technical systems and business models. Scholars contend that it is the interactions of the networks of actors, technologies, and institutions that drive transition processes toward sustainability. In this volume, we further advance this line of inquiry with a special reference to strategic management of sustainability transitions in both theory and practice. In theoretical development, we have selected three chapters to encompass the themes of: 1) the interactions between ecological systems and human systems; 2) a critique on the continuous expansion of large multinational companies and their strategic control of key resource inputs through the lenses of circular economy and natural resource-based view; and 3) a multi-stakeholder ecosystems framework for the management of sustainability transitions with structural alignment of focal value propositions. The United Nations Sustainable Development Goals (SDGs) are critically addressed and empirically examined. It will become an essential reader and a reference book for researchers and postgraduate students interested in strategic management, international business.
