Federation over the Web Klaus P. Jantke, Aran Lunzer, Nicolas Spyrtos, Yuzuru Tanaka, 2006-01-19 The lives of people all around the world especially in industrialized nations continue to be changed by the presence and growth of the Internet. Its influence is felt at scales ranging from private lifestyles to national economies boosting the pace at which modern information and communication technologies influence personal choices along with business processes and scientific endeavors. In addition to its billions of HTML pages the Web can now be seen as an open repository of computing resources. These resources provide access to computational services as well as data repositories through a rapidly growing variety of Web applications and Web services. However, people's usage of all these resources barely scratches the surface of the possibilities that such richness should offer. One simple reason is that given the variety of information available and the rate at which it is being extended it is difficult to keep up with the range of resources relevant to one's interests. Another reason is that resources are offered in a bewildering variety of formats and styles so that many resources effectively stand in isolation. This is reminiscent of the challenge of enterprise application integration familiar to every large organization, be it in commerce, academia, or government. The challenge arises because of the accumulation of information and communication systems over decades, typically without the technical provision or political will to make them work together. Thus the exchange of data among those systems is difficult and expensive, and the potential synergistic effects of combining them are never realized.

The Rhetoric of Social Movements Nathan Crick, 2020-09-22 This collection provides an accessible yet rigorous survey of the rhetorical study of historical and contemporary social movements and promotes the study of relations between strategy, symbolic action, and social assemblage. Offering a comprehensive collection of the latest research in the field, *The Rhetoric of Social Movements: Networks, Power, and New Media* suggests a framework for the study of social movements grounded in a methodology of slow inquiry and the interconnectedness of these imminent phenomena. Chapters address the rhetorical tactics that social movements use to gain attention and challenge power, the centrality of traditional and new media in social movements, the operations of power in movement organization, leadership, and local and global networking, and emerging contents and environments for social movements in the twenty-first century. Each chapter is framed by case studies drawn from movements across the world, ranging from Black Lives Matter and Occupy to Greek anarchism and indigenous land protests, that ground conceptual characteristics of social movements in their continuously unfolding reality, furnishing readers with both practical and theoretical insights. *The Rhetoric of Social Movements* will be of interest to scholars and advanced students of rhetoric, communication, media studies, cultural studies, social protest, and activism, and political science.
