Proceedings Of The 1988 Workshop On Computational:

Proceedings of the Second Workshop on Computational Learning Theory Ronald L. Rivest,David Haussler,Manfred Warmuth,1989   **Computational Learning Theory** Martin Anthony,N. Biggs,1997-02-27 Computational learning theory is a subject which has been advancing rapidly in the last few years The authors concentrate on the probably approximately correct model of learning and gradually develop the ideas of efficiency considerations Finally applications of the theory to artificial neural networks are considered Many exercises are included throughout and the list of references is extensive This volume is relatively self contained as the necessary background material from logic probability and complexity theory is included It will therefore form an introduction to the theory of computational learning suitable for a broad spectrum of graduate students from theoretical computer science and mathematics   **The Mathematics Of Generalization** David. H Wolpert,2018-03-05 This book provides different mathematical frameworks for addressing supervised learning It is based on a workshop held under the auspices of the Center for Nonlinear Studies at Los Alamos and the Santa Fe Institute in the summer of 1992   Proceedings of the Twenty-fifth Annual ACM Symposium on Theory of Computing ,1993   Stoc 92 ,1992   **Journal of the Association for Computing Machinery** ,1997 Covers all areas of computer science including artificial intelligence complexity of algorithms computational geometry computing in technology and the sciences computer architecture cryptology database systems networks and digital libraries data structures and analysis of algorithms database theory decisions uncertainty and computation distributed computing formal languages and complexity theory graph theory and combinatorial structures logic in computer science machine learning and computational learning theory numerical computation operations research parallel algorithms parallel computation programming languages and methodology and scientific computing   *Book Review Index Cumulation, 1989* Neil E. Walker,Beverly Baer,1990-04 The Index provides a broad coverage and access to book reviews in the general social sciences humanities sciences and fine arts as well as general interest magazines and includes journals from Great Britain Canada Switzerland Israel and Australia In addition it indexes several journals that while published in the US concentrate on reviewing foreign published or foreign language books These include Hispania French Review German Quarterly and World Literature Today   On Space-bounded Learning and the Vapnik-Chervonenkis Dimension Sally Floyd,1989   **Inductive Inference, DFAs, and Computational Complexity** Leonard Brian Pitt,University of Illinois at Urbana-Champaign. Department of Computer Science,1989 Abstract This paper surveys recent results concerning the inference of deterministic finite automata DFAs The results discussed determine the extent to which DFAs can be feasibly inferred and highlight a number of interesting approaches in computational learning theory   SIAM Journal on Computing Society for Industrial and Applied Mathematics,1993   **Characterizing PAC-learnability of Semilinear Sets and Commutative Regular Languages** Naoki Abe,1989 We also show that the entire class of commutative deterministic finite state automata on an arbitrary alphabet size is learnable On the neutral to

negative side we show that when the integers are encoded in binary the learning problem for semilinear sets as well as a class of subsets of N superscript m much simpler than semilinear sets is as hard as learning DNF a central open problem in the field We also show that all of our positive results are for concept representation classes for which the problem of finding a minimum consistent representation is NP hard   Topics in Computational Learning Theory and Graph Algorithms Raymond Acton Board,University of Illinois at Urbana-Champaign. Department of Computer Science,1990 Two new online protocols for graph algorithms are defined Bounds on the performance of online algorithms for the graph bandwidth vertex cover independent set and dominating set problems are demonstrated Various results are proved for algorithms operating according to a standard online protocol as well as the two new protocols   **On the Necessity of Occam Algorithms** Raymond Board,Leonard Pitt,University of Illinois at Urbana-Champaign. Department of Computer Science,1989 More generally the property of closure under exception lists is defined and it is shown that for any concept class with this property PAC learnability of the class is equivalent to the existence of an Occam algorithm for the class An interpretation of these results is that for many classes PAC learability is equivalent to data compression   Learning Commutative Deterministic Finite State Automata in Polynomial Time Naoki Abe,1990 By Littlestone s result Lit89 on converting a mistake bound in this model to a sample complexity bound for PAC learning this result also implies that the class of CDFA s is PAC learnable from random labeled examples only in polynomial time with sample complexity formula using a different class of representations The class of CDFA s is one of the few natural non trivial subclasses of DFA s which have been shown to be polynomially predictable to date   *On the Learnability of Disjunctive Normal Form Formulas and Decision Trees* Howard J. Aizenstein,1993   *The Cumulative Book Index* ,1992 A world list of books in the English language   **Journal of the ACM.** ,1998   **Bounds on the Sample Complexity of Bayesian Learning Using Information Theory and the VC Dimension** David Haussler,1991 Abstract In this paper we study a Bayesian or average case model of concept learning with a twofold goal to provide more precise characterizations of learning curve sample complexity behavior that depend on properties of both the prior distribution over concepts and the sequence of instances seen by the learner and to smmoothly unite in a common framework the popular statistical physics and VC dimension theories of learning curves To achieve this we undertake a systematic investigation and comparison of two fundamental quantities in learning and information theory the probability of an incorrect prediction for an optimal learning algorithm and the Shannon information gain This study leads to a new understanding of the sample complexity of learning in several existing models   *Verzeichnis lieferbarer Bücher* ,2002   **Readings in Knowledge Acquisition and Learning** Bruce G. Buchanan,David C. Wilkins,1993 Readings in Knowledge Acquisition and Learning collects the best of the artificial intelligence literature from the fields of machine learning and knowledge acquisition This book brings together the perspectives on constructing knowledge based systems from these two historically separate subfields of artificial intelligence
