Stochastic Partial Differential Equations and Their Applications Boris L. Rozovskii, Richard B. Sowers, 2014-03-12 This volume consists of 24 papers submitted for publication by the invited speakers of the IFIP International Conference on Stochastic Partial Differential Equations and their Applications Most of them are research papers however a few surveys written by world renowned experts are also included The aim of the conference was to bring together mathematicians and physicists and engineers representing academic as well as industrial fields interested in the theory and applications of SPDEs The field of SPDEs is one of the most dynamically developing areas at the cross roads of several sciences It is especially attractive for many because of its interdisciplinary character and enormous richness of already existing as well as potential applications There were about one hundred participants registered for the conference With rare exceptions all of the most active researchers in the field of SPDEs throughout the world were present at the conference The main topics for discussion at the conference were non linear SPDEs and Markov property for random fields modern stochastic calculus numerical and asymptotic methods for SPDEs applications of SPDEs with emphasis on non linear filtering stochastic control and statistical fluid dynamics

Stochastic Partial Differential Equations and Applications Giuseppe Da Prato, 2002 This work is based on the proceedings of the International Conference on Stochastic Partial Differential Equations and Applications V held in Trento Italy It offers state of the art applications in filtering theory stochastic quantization quantum probability and mathematical finance as well as identifying paths for future research in the field

Stochastically Excited Nonlinear Ocean Structures Michael F. Shlesinger, T. Swann, 1998 Ocean structures including ships boats piers docks rigs and platforms are subject to fair weather wind and waves as well as violent storms A scientific analysis of these structures under varying conditions requires a mix of civil engineering physics and applied mathematics Chapters by experts in these fields are presented which explore the nonlinear responses of ocean structures to stochastic forcing Theoretical methods calculate aspects of time frequency and phase space responses Probabilities governed by stochastic differential equations are investigated directly or through moment correlations such as power spectra Calculations can also involve level crossing statistics and first passage times Tiff's book will help scientists study stochastic nonlinear equations and help engineers design for short term survivability of structures in storms and long life in the face of everyday fatigue
