DIANA Computational Mechanics '94 Ger M.A. Kusters, Max A.N. Hendriks, 2012-12-06 Advances in computational mechanics can only be achieved on the basis of fruitful discussion between researchers and practising engineers This has been achieved in the present publication which contains all the papers presented at the first International DIANA Conference on Computational Mechanics Nearly all papers show the results of calculations achieved with the DIANATM Finite Element System Broadly the book follows the line of research from the material level via the element level to the structural level But it should be emphasised that much current research passes from one level to the other and such an interaction is also reflected here The following domains are treated hyper elasticity visco plasticity and cracking enriched damaging continua models material experiments vs computational models stochastic approaches fluid structure interactions element technology geometrical nonlinearity and structural instability nonlinear dynamics solution procedures **Applied Mechanics Reviews**
