**Women Behind the Wheel** Nancy A. Nichols, 2024-03-05 From the adolescent thrill of getting a driver s license to the dreaded commutes of adulthood from vintage muscle cars to electric vehicles this groundbreaking book reveals the outsized impact the car has had and will continue to have on the lives of women Since their inception cars have defined American culture but until quite recently car histories were largely written by and about men with little attention given to the fascinating story of women and cars In this engaging non fiction narrative Nancy A Nichols the daughter of a used car salesman uses the cars her father sold and the ones her family drove to tell a larger story about how the car helped to define modern womanhood From her sister s classic Mustang to her mother s Chevy

Convertible to her own Honda minivan Nichols tells a personal story in order to shed light on a universal one Cars helped women secure the right to vote changed the nature of romance and influenced both fashion and child rearing customs In the just over 100 years since their inception cars have created possibilities for commerce and romance even as they exposed women to new kinds of danger Women Behind the Wheel explores the uniquely gendered landscape of the automobile detailing the many reasons why cars are both more expensive and more dangerous for women drivers The automobile is on the cusp of momentous change As we advance into the era of electric connected and autonomous vehicles Nichols shows us why we should hit the brakes and look back in the rear view mirror at this long and fascinating history What is the role of the car in our lives Should we be more skeptical of technology in our society In Women Behind the Wheel Nichols argues convincingly that only by understanding the many ways the car has changed us can we hope to prepare ourselves for this brave new era

of the electric vehicle charging infrastructure along with the relevant aspects of charging modes is provided A showcase of the analysis of different car sharing models within Europe is given after which a specific case study is analyzed in greater detail The parameters and features for the system were derived from a competitive benchmark of the car sharing models on the market today The objective was to assist the company in planning and managing a corporate e vehicle sharing system in a profitable way while offering the employees good quality service Therefore the cost of designing and installing the P3 EV charging station was evaluated On this matter empirical data was gathered from P3 employees to better understand their daily commute their needs and their expectations of the system An optimization model for distances cost and charging patterns was discussed and formalized as an integer linear program in MATLAB Given the complexity inherent to this optimization model stochastic distribution was employed to minimize the cost for the company taking into consideration the trips paid and the costs involved namely the personal wage of an employee A focus on the optimal design of an e vehicle sharing system was necessary while considering the problem's dimensionality number of vehicles parking places battery capacities etc and employee relocation time This study determines if the system provides higher net benefits to the company than available transportation alternatives As a result of this pricing comparison a significant reduction in total cost could be achieved for the company The data set conclusively supports the implementation of the e vehicle sharing system which provides a decreased cost versus the use of public transportation A possible avenue of future research is to extend the functionality of the developed model by adding a responsive user demand and possibly maximizing the car sharing ridership between employees
