Proceedings Of The Fourth European Working Session On Learning:

Inductive Logic Programming Stephen Muggleton, 1992 Inductive logic programming is a new research area emerging at present Whilst inheriting various positive characteristics of the parent subjects of logic programming and machine learning it is hoped that the new area will overcome many of the limitations of its forbears This book describes the theory implementations and applications of Inductive Logic Programming Proceedings of the Sixteenth Annual Conference of the Cognitive Science Society Ashwin Ram, Kurt Eiselt, 2019-05-23 This volume features the complete text of all regular papers posters and summaries of symposia presented at the 16th annual meeting of the Cognitive Science Society

Machine Learning Proceedings 1991 Lawrence A. Birnbaum, Gregg C. Collins, 2014-06-28 Machine Learning

Machine Learning Ryszard S. Michalski, George Tecuci, 1994-02-09 Multistrategy learning is one of the newest and most promising research directions in the development of machine learning systems The objectives of research in this area are to study trade offs between different learning strategies and to develop learning systems that employ multiple types of inference or computational paradigms in a learning process Multistrategy systems offer significant advantages over monostategy systems They are more flexible in the type of input they can learn from and the type of knowledge they can acquire As a consequence multistrategy systems have the potential to be applicable to a wide range of practical problems This volume is the first book in this fast growing field It contains a selection of contributions by leading researchers specializing in this area See below for earlier volumes in the series **7. Österreichische Artificial-Intelligence-Tagung**

Hermann Kaindl, 1991 COGNITIVA 90 Teuvo Kohonen, Françoise Fogelman-Soulié, 1991 The reader of this book will find contributions on a large number of topics which are addressed either from the Artificial Intelligence or the Neural Networks or the Cognitive Science paradigm It is through the confrontation of these various contributions that this book offers the reader the most original and stimulating perspective The invited lectures by outstanding experts provide global integrated overviews of their respective domains The contributed papers offer focused presentations of on going research work

Machine Learning D. Sleeman, Peter Edwards, 1992 Machine Learning Proceedings 1992 **Enhancing the Knowledge Engineering Process** Luc Steels, Brice Lepape, 1992 In 1983 the Commission of the European Communities launched an ambitious 10 year programme in information technology called ESPRIT European Strategic Programme for Research and Development in Information Technology The papers in this volume focus on the contributions of the second phase of the programme ESPRIT II to the area of knowledge engineering and more specifically on the trend towards more disciplined knowledge engineering methodologies An attempt has been made to establish a coherent volume that will act as a lasting reference source for experts in the field This has lead to a focus on a small number of projects and topics Further contributions have been sourced primarily from those that have established a significant advance in respect of the international state of the art without losing sight of practical realisability and industrial acceptance The book captures work

centering around the concept of knowledge level modelling and its use in structuring the complete life cycle validating expert systems acquiring knowledge enhancing capabilities and achieving genericity and re use It shows the high quality and the advanced nature of the research currently being undertaken and indicates that important innovations of extreme relevance to the industry have been achieved However further research and advanced development clearly continues to be needed because the European information technology has far from reached the level of competitiveness required to acquire a greater international market share It is hoped this publication will play an important role in this movement forwards

Current Trends in Knowledge Acquisition Bob Wielinga,1990 Knowledge acquisition has become a major area of artificial intelligence and cognitive science research The papers in this book show that the area of knowledge acquisition for knowledge based systems is still a diverse field in which a large number of research topics are being addressed However several main themes run through the papers First the issues of integrating knowledge from different sources and K A tools is a salient topic in many papers A second major topic in the papers is that of knowledge modelling Research in knowledge based systems emphasises the use of generic models of reasoning and its underlying knowledge An important trend in the area of knowledge modelling aims at the formalisation of knowledge models Where the field of knowledge acquisition was without tools and techniques years ago now there is a rapidly growing body of techniques and tools Apart from the integrated workbenches already mentioned above several papers in this book present new tools Although knowledge acquisition and machine learning have been considered as separate subfields of AI there is a tendency for the two fields to come together This publication combines machine learning techniques with more conventional knowledge elicitation techniques A framework is presented in which reasoning problem solving and learning together form a knowledge intensive system that can acquire knowledge from its own experience
