Astronomy and Astrophysics - Volume I Oddbjørn Engvold Bozena Czerny, John Lattanzio and Rolf Stabell,2012-11-30 Astronomy is the science of everything with the exception of the Earth and everything on it and inside Astronomy has a rich heritage dating back to the myths and legends of antiquity and the course of civilization has been greatly affected by mankind s interpretation of what they saw in the starry sky and experienced through seasonal changes associated with the Sun and Moon Early astronomy is associated with the definition of calendars which were needed to predict the dates of such as religious festivals and the numbers of months A gradual shift of emphasis from astronomy to its sister astrophysics which took place through the 19th century is generally attributed to the measurement of reliable stellar distances and the development of spectroscopy as a tool for understanding the physical nature of stars Many paradigms in astronomy and its many subfields are continuously being shaken New insights in the intricacy and elegance of the cosmos are steadily being obtained Every few decennia our concepts of the Universe are challenged and substantially modified The reasons for this are the continuous development of new observing techniques and instruments for observatories both ground based and in space in addition to considerable progress in mathematics and physics including computational ability Our Universe harbors numerous phenomena and processes representing conditions that cannot be duplicated in terrestrial laboratories Astronomy therefore frequently leads to fundamentally new insight and knowledge far beyond astronomy itself Last but not least it represents a first inspiring introduction to natural science especially among young people which is an extra motivation to many scientists to contribute to the Astronomy and Astrophysics Theme of this Encyclopedia The book on Astronomy and Astrophysics with contributions from distinguished experts in the field represents a first inspiring introduction to natural science especially among young

people which is an extra motivation to many scientists to contribute to the Astronomy and Astrophysics Theme of this Encyclopedia The first chapter which treats the development of astronomy and astrophysics in a historical perspective is followed by an account of the impact of astronomy on human culture and civilization Observational astronomy is facing a number of environmental challenges The nature and complexity of these and how the associated problems are met and overcome are described in the third article Various aspects of our solar system are covered by authoritative articles on the Sun planets including their satellites and smaller bodies plus a review of the laws of motions and orbits of celestial bodies The detection and studies of exo solar planetary systems is rapidly developing field in astronomy which is treated in a separate chapter Then follow fascinating up to date overviews on stars describing their formation structure and life cycles Stars are the building blocks of larger cosmic entities leading to the enigmatic galaxies composed of billions of stars and gradually to clusters of galaxies The final chapters cover the origin and evolution of galaxies and the large scale structure of the Universe including dark matter and dark energy which are among the most fascinating problems of physics today These two volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers and NGOs *American Journal of Physics*, 1991 The New Encyclopædia Britannica: Macropædia, 1991 *Thursday's Universe* Marcia Bartusiak, 1986

Jozef Kelemen, Petr Sosik, 2003-06-30 Why is the question of the difference between living and non living matter intellectually so attractive to the man of the West Where are our dreams about our own ability to understand this difference and to overcome it using the firmly established technologies rooted Where are for instance the cultural roots of the enterprises covered nowadays by the discipline of Artificial Life Contemplating such questions one of us has recognized 6 the existence of the eternal dream of the man of the West expressed for example in the Old Testament as follows the Lord God formed the man from the dust of the ground and breathed into his nostrils the breath of life and the man became a living being Genesis 2 7 This is the dream about the workmanlike act of the creation of Adam from clay about the creation of life from something non living and the confidence in the magic power of technologies How has this dream developed and been converted into a reality and how does it determine our present day activities in science and technology What is this confidence rooted in Then God said Let us make man in our image Genesis 1 26 Man believes in his own ability to repeat the Creator's acts to change ideas into real things because he believes he is godlike This confidence is using the trendy Dawkins term perhaps the most important cultural meme of the West
