*Wheat* E. H. Satorre, Gustavo A. Slafer, 2024-11-15  
Discussing the latest processes involved in researching yield generation, *Wheat Ecology and Physiology of Yield Determination* will help you design various types of crop production systems for maximum yield. Featuring information on developing high yielding low input and quality oriented systems, this book offers you both physiological and ecological approaches that will help you understand the crop as well as increase its production. Discussing aspects of wheat growth for specific regions around the world, *Wheat* provides you with information that will improve the size and quality of your crops, including how temperature vernalization and the photoperiod affect the development of wheat, using the correct amount of nitrogen fertilizers for wheat crops, an explanation of the reproduction and nitrogen cycles of wheat, how elements and conditions such as lipids, proteins, nitrogen, and climate enhance grain quality, estimating and determining optimal sowing dates, examining factors that may affect wheat yield density, relationships such as planting arrangement and date of sowing, preventing seed decay, and examining effects of mildews and leaf blights. Examining historical trends of the crop to see what further research needs to be done, you will also receive information on the genetic gains in wheat research that are improving the physiological traits and numerical components of this essential grain. Within *Wheat*, you will find data and methods from international experts in the field that will improve the yield and growth of the world's most important crop.

*Nitrogen Management in Crop Production* Nand Kumar Fageria, 2014-06-25  
One of the main approaches for safeguarding food security, sustainable development has increased demand for knowledge on fertilizer management in crop production. Among essential plant nutrients, nitrogen is one of the most important yield limiting nutrients, mainly responsible for determining yield and yield components in cereals and legumes. It is  
**Crop Yield** Donald L. Smith, Chantal Hamel, 2012-12-06  
This book has been prepared for those seeking a better understanding of the functioning of crop plants, particularly the processes that lead to the generation of products valued by human beings. The contributors, who are among the world's foremost experts on the important crops upon which humanity depends for food or fibre, address the relevant processes for their specific crop. Currently, the world population is continuing

to increase It is projected to plateau around the middle of the next century and while there is considerable controversy regarding the population level when this plateau is achieved most estimates are in the area of 10 000 000 000 At present there are about 800000000 people in the world who do not have secure access to food Over the last 50 years various aspects of agricultural research have been combined to increase the output of world crops approximately 2.5 fold Given the need to feed the increasing population and to provide better access it is predicted that during the next 50 years the agricultural research community must repeat this achievement

**Crop Science** ,2006 *Genetic and Molecular analysis of yield and physiological traits in three line hybrids in rice (Oryza sativa L.) under aerobic condition* Sathya Ramalingam,2012-11-27 Doctoral Thesis Dissertation from the year 2012 in the subject Biology Genetics Gene Technology Tamil Nadu Agricultural University Madurai Agricultural College and Research Institute course Ph D language English abstract An investigation in rice *Oryza sativa* L was carried out subjecting six lines and 15 testers crossed in a Line x Tester mating design to estimate gene action combining ability and heterosis for yield and drought tolerant traits under aerobic condition The 21 parents were also surveyed using SSR markers From the Line x Tester analysis the hybrids exhibited significant variation among themselves for all the characters studied under aerobic condition The study of gene action for drought tolerance and yield component traits revealed that all the traits exhibited dominant gene action which was predominant Therefore to harness the dominant gene effects either heterosis breeding or selection at later generations would be an appropriate breeding methodology Based on the per se performance of lines and testers the following parents i e IR79128A L1 IR79156A L2 COMS14A L5 COMS24A L6 IR 80286 22 3 6 1R T3 and IR7925A 428 2 1 1R T4 were adjudged as the best parents and crosses involving them would be expected to throw desirable segregants for both yield and drought tolerant traits under aerobic condition Based on the gca effects the parents IR79128A L1 IR70369A L4 IR79156A L2 BI 33 T15 IR79582 21 2 2 1R T5 KMP 105 T11 T1 IR 69726 29 1 2 2R and MAS 946 1 T9 were the best general combiners and the crosses involving them would result in the identification of superior segregants with favourable genes for both drought and yield Out of 21 parents evaluated based on per se and gca effects three lines viz IR79128A L1 IR79156A L2 and IR70369A L4 and three testers viz IR7925A 428 2 1 1R T11 KMP 148 T12 and BI 33 T15 were

identified as the best genotypes which will be utilized in further breeding programmes as parents for improvement of yield and drought tolerance under aerobic conditions The cross combination IR70369A MAS 26 L4 x T10 was identified as the best for recombination breeding to get desirable segregants for yield and drought tolerant traits under aerobic conditions The cross combinations viz IR70369A IR 7925A 428 2 1 1R L4 x T4 and IR70369A KMP 105 L4 x T11 had high per se sca effects and standard heterosis for drought tolerant and yield traits under aerobic conditions **Physiology of Soybean Plant P**
