### **Advances in Neuroendocrinology**

*by A. V. Nalbandov, 525 pp., ill., University of Illinois Press, Urbana, Ill., 1963. \$7.50*

This is a symposium on neuroendocrinology held at Miami, Florida, in December 1961. Most of the papers are general reviews of areas of neuroendocrine research in which the authors are acknowledged leaders. Among others, W. H. Sawyer reviews the posterior pituitary secretions and W. F. Ganong the central nervous system control of ACTH secretion; S. A. D'Angelo discusses similar control of thyroid-stimulating hormones and B. Flerko of the gonadotropins. These men are endocrinologists. When they speak of central nervous system control, customarily they mean the endocrine effects of electrical stimuli or lesions in the hypothalamus only. With this limited aspect of neural control prevailing throughout the book, few papers are interesting to neurologists. W. J. H. Nauta writes an illuminating account of the neuroanatomical position of the hypothalamus in the brain. Combining the phylogenetic approach with his own anatomical studies he reaches provocative conclusions about the neural control of hypothalamic activity and thus of the endocrine system. No one interested in neural regulation of the viscera would want to overlook this chapter.

Paul Munson's paper on drugs that block the neural stimulus to ACTH release is useful to neurologists accustomed to thinking of the behavioral effects of drugs like morphine, reserpine, and the phenothiazines and not of their influence upon the visceral state of the body. C. W. Lloyd reviews endocrine abnormalities seen in human neurological illnesses in a paper that forms a useful bridge between clinical neurology and endocrinology.

The other papers are thorough reviews, readable enough and useful for bibliographical reference, but little new and nothing startling is to be found in this book. Neuroendocrinology as presented here is more endocrine than neural. Few investigators are studying with profundity the brain mechanisms of endocrine control that clearly exist and function with delicate efficiency. Knocking about in that neuronal traffic jam, the hypothalamus, or scooping out the brain to a mesencephalic level seem unlikely approaches to the subtleties of the problem.

The book is clearly printed, well illustrated, and inexpensive.

### **Tropical Neurology**

*Edited by Ludo van Bogaert, José Pereyra Käfer and Gustavo F. Poch, 329 pp., ill., Lopez Libreros Editores S. R. L., Buenos Aires, Argentina, 1963. \$8.50*

In the fall of 1961 the first International Symposium on Tropical Neurology was held in Buenos Aires under the sponsorship of the Problem Commission in Tropical Neurology of the World Federation of Neurology and the Sociedad Neurológica Argentina. This volume, edited by Dr. van Bogaert, president of the World Federation of Neurology and Drs. Pereyra Käfer and Poch, professors of neurology at the University of Buenos Aires, includes the proceedings of the symposium.

Neurological diseases restricted to tropical climates and occurring in the course of other so-called tropical diseases constitute one of the very important and as yet inadequately explored chapters of disorders of the nervous system. Important investigations on many aspects

Stromgren, 2013-03-12 Bearbeitet von zahlreichen Fachwissenschaftlern **The Human Brain** Miguel Marín-Padilla, 2010-10-21 This book is unique among the current literature in that it systematically documents the prenatal structural development of the human brain. It is based on lifelong study using essentially a single staining procedure, the classic rapid Golgi procedure, which ensures an unusual and desirable uniformity in the observations. The book is amply illustrated with 81 large high quality color photomicrographs never previously reproduced. These photomicrographs obtained at 6, 7, 11, 15, 18, 20, 25, 30, 35, and 40 weeks of gestation offer a fascinating insight into the sequential prenatal development of neurons, blood vessels, and glia in the human brain.

**Physiology and Pathology of Dendrites** Georg W. Kreutzberg, 1975 Maturation of the Nervous System, 2011-09-22 Maturation of the Nervous System **Aging and Cognitive Processes** Fergus Craik, 2012-12-06 For a variety of reasons there has been an explosion of interest in research on aging over the past few years. The reasons include an awareness that a large and growing proportion of our population is over 65 and that research findings can contribute to their health satisfaction and efficiency as members of society; the fact that funding agencies have endorsed the need for more research effort in the area by setting up special programs; and also the fact that researchers themselves are turning more to practical problems as many theoretical issues in experimental psychology at least seem to remain as intractable as ever. Thus at present there is widespread interest in aging, but there is also a lack of knowledge as to what has already been accomplished in the area, what the theoretical issues are, and what factors contribute to the methodological and practical difficulties. The time is propitious for meetings of experts in various aspects of the aging process, both to discuss among themselves latest advances in the field and also to integrate known information for researchers and practitioners. In the summer of 1980 we organized such a meeting as the 10th annual psychology symposium to be held at the Erindale Campus of the University of Toronto. The topic chosen was Aging and Cognitive Processes, and the edited contributions to the symposium form the chapters of the present book. **The Aging Brain and Senile Dementia** K. Nandy, 2012-12-06 There are currently about 21 million people over 65 years in the United States, and over a million of them suffer from a severe degree of mental impairment. This number will undoubtedly increase as more and more people attain their full lifespan. The Veterans Administration is acutely aware of this problem in the population it serves. Currently there are about 31 million veterans in the United States. About 13 percent of these veterans are over 65 years of age, and the number is expected to increase to 40 percent by the turn of the century. In recognition of the pressing need to address this problem, eight Geriatric Research, Educational, and Clinical Centers (GRECCs) have been established under the auspices of the Veterans Administration, and the guiding spirit of Dr. Paul Haber, Assistant Chief Medical Director for Professional Services, Veterans Administration. The purpose of these centers is to develop a better understanding of the complex biomedical and socioeconomic problems of the

aged in general and to enhance the quality of life of the older veterans in particular o Gerontologists working towards a better understanding of the aging process and better care of the aged have made major progress in the biomedical field in the last decade Among the efforts made by the Veterans Administration the department of Extended Care and Academic Affairs have sponsored a number of symposia in the field of Gerontology *Problems and Concepts in Developmental Neurophysiology* Peter Kellaway,Jeffrey L.
