Analyzing Health Data in R for SAS Users Monika Maya Wahi, Peter Seebach, 2017-11-22 Analyzing Health Data in R for SAS Users is aimed at helping health data analysts who use SAS accomplish some of the same tasks in R. It is targeted to public health students and professionals who have a background in biostatistics and SAS software but are new to R. For professors it is useful as a textbook for a descriptive or regression modeling class as it uses a publicly available dataset for examples and provides exercises at the end of each chapter. For students and public health professionals not only is it a gentle introduction to R but it can serve as a guide to developing the results for a research report using R software. Features: Gives examples in both SAS and R. Demonstrates descriptive statistics as well as linear and logistic regression. Provides exercise questions and answers at the end of each chapter. Uses examples from the publicly available dataset Behavioral Risk Factor Surveillance System BRFSS 2014 data. Guides the reader on producing a health analysis that could be published as a research report. Gives an example of hypothesis driven data analysis. Provides examples of plots with a color insert.
