The purpose of the book is to consolidate and integrate what is known about tropical fishes marine and freshwater species. The twelve chapters focus on the physiological adaptations acquired during the evolutionary process to cope with warm and shallow hypoxic waters from tropical and neotropical hydrographic basins as well as with the intertidal and coral reef habitats which occur in abundance in tropical seas. The special characteristics of tropical fish fauna will be issued in order to explain the tropical fish radiation which gave rise to such extreme fish diversity. This volume is the outcome of a NATO Advanced Study Institute held in August 1979 at Bishop's University Lennoxville Quebec Canada. About 130 participants from all the countries of the alliance as well as India and Japan attended this event which lasted two weeks. Seventeen of these participants had been invited to present reviews of chosen topics usually in their specialty. This book is constituted mainly of these presentations which were prepared

as chapters In addition six of the participants whose seminars were found to complement the main chapters were coopted by the invited lectures authors to provide additional chapters Although a lecture was given on electric fields a chapter on this matter is unfortunately absent due to the lack of preparation time One may say that Environmental Physiology of Fishes as a discipline originated in Canada Having been involved as a teacher and worker in this field since 19 54 it was but natural that I was tempted to organise an ASI and get a volume out on the matter I was encouraged by discussions with colleagues and the acceptance on the part of a large number of eminent colleagues to attend the ASI deliver lectures and write chapters
