Phytoplankton And Trophic Gradients:

Phytoplankton and Trophic Gradients M. Alvarez-Cobelas, Colin S. Reynolds, P. Sanchez-Castillo, Jørgen Kristiansen, 2013-11-11 These proceedings deal with the relationship between species composition of freshwater phytoplankton and the trophic gradient Particular regard is paid to the composite question what lives where and why Overview papers report the state of the art and suggest that the trophic spectrum appears to be a probabilistic outcome of several dimensions of variability that impinge upon phytoplankton species selection Studies on community structure span all latitudes from those of Antarctica to equatorial Brazil and also include reports on light and nutrient gradients pH and fish stock effects on species composition Seasonal and longterm phytoplankton dynamics in lakes of varying trophic status are also considered Finally studies on the taxonomy and autoecology of some groups e g Volvocales Chrysophytes and Euglenophytes living at the extremes of the trophic spectrum contribute to our knowledge of this usually neglected phytoplankton This is the first time that a book covers such a topic and it will prove an excellent source of information to anyone working on phytoplankton ecology and ecological indicators Limnologists in general algologists and the technical staff at water authorities will all benefit by reading this book

The Spatial Distribution of Microbes in the Environment Rima Franklin, Aaron Mills, 2007-09-04 In my first microbiology class in 1968 Richard Wodzinski opened his first lecture with Wodzinski's Laws of Bacteriology Those laws were 1 Bacteria are very very small 2 Bacteria are our friends and 3 Bacteria always have the last word These simple statements motivated a career of curiosity and started me on a wild ride of discovery with my miniscule colleagues The realization that an entity so tiny could mediate critical ecological processes observed across scales of kilometers begs for an explanation of how populations and communities are distributed within those large spaces How big is a microbial community Where does one stop and another start Are there rules of organization of the communities into spatially discrete patches and can those patches be correlated with observed processes and process rates Over the years I have added what I tell my classes are Mills Corollaries to Wodzinski's Laws With respect to the topic of this volume the corollaries to the first law are 1a But there are a whole lot of them and 1b They can grow very very fast Again distribution in space and time is a central theme and it has motivated much of my effort over the last 30 years
