Gurak, 2000 Oral Presentations for Technical Communication provides what most technical communication books lack clear accessible instruction on speaking This book helps professionals master public speaking in a technical or scientific environment whether it be through traditional presentations with whiteboards and flipcharts or presentations with computer software such as PowerPoint Unlike most general speech texts which include examples from various disciplines Oral Presentations uses specific examples from the fields of science and technology and shows how skilled technical communicators make complex information accessible to non technical audiences The first three parts of the book

focus on basic skills and concepts including four basic types of presentations relevant to technical communication. The last two parts introduce more advanced topics such as legal privacy and censorship issues and the changing nature of presentations in the digital age. Oral Presentations thus brings together the best most current instruction from three fields: technical communication, rhetoric, speech communication, and computer and information technology. For professionals in public speaking, oral presentations, and technical communication.

Being a Researcher Carlo Ghezzi, 2020-06-22. This book explores research from the researchers' perspective: why to engage in research, what methods to follow, how to operate in daily life, what the responsibilities are, how to engage with society, and the ethical issues confronting professionals in their day to day research. The book systematically discusses what every student should be told when entering academic or industrial research so that they can avoid going through the painful process of learning by personal experience and lots of errors. Rather than being technical, it is philosophical and sometimes even anecdotal, combining factual information and commonly accepted knowledge on research and its methods while at the same time clearly distinguishing between objective and factual concepts and data and subjective considerations. The book is about scientific research in general and as such holds true for any scientific field. However, it is fair to say that the different fields differ in their research cultures and in their eco systems. The book reflects the author's experience accumulated over almost 50 years of teaching graduate courses and lecturing in doctoral symposia at Politecnico di Milano, University of Zurich, TU Wien, Peking University, and at various conferences and of academic research in informatics, also known as computer science. This book is mainly intended for students who are

considering research as a possible career option for in progress researchers who have entered doctoral programs and for junior postdoctoral researchers It will also appeal to senior researchers involved in mentoring students and junior researchers
