Taking Sustainable Cities Seriously, second edition Kent E. Portney, 2013-01-11 A theoretically driven comparison of sustainability programs in American cities updated with the latest research and additional case studies Today most major cities have undertaken some form of sustainability initiative Yet there have been few systematic comparisons across cities or theoretically grounded considerations of what works and what does not and why In Taking Sustainable Cities Seriously Kent Portney addresses this gap offering a comprehensive overview and analysis of sustainability programs and policies in American cities After discussing the conceptual underpinnings of sustainability he examines the local aspects of sustainability considers the measurement of sustainability and offers an index of serious sustainability for the fifty five largest cities in the country examines the relationship between sustainability and economic growth and discusses issues of governance equity and implementation He also offers extensive case studies with separate chapters on large medium size and small cities and provides an empirically grounded analysis of why some large cities are more ambitious than others in their sustainability efforts This second edition has been updated throughout with new material that draws on the latest research It also offers numerous additional case studies a new chapter on management and implementation issues and a greatly expanded comparative analysis of big city sustainability initiatives Portney shows how cities use the broad rubric of sustainability to achieve particular political ends and he dispels the notion that only cities that are politically liberal are interested in sustainability Taking Sustainable Cities Seriously draws a roadmap for effective sustainability initiatives

Seeing Like a City Ash Amin, Nigel Thrift, 2017-01-09 Seeing like a city means recognizing that cities are living things made up of a tangle of networks built up from the agency of countless actors Cities must not be considered as expressions of larger paradigms or sites of human effort and organization alone Within their density size and sprawl can be found a world of symbols bodies buildings technologies and infrastructures It is the machine like combination interaction and confrontation of these different elements that make a city Such a view locates urban outcomes and influences

in the character of these networks which together power urban life allocating resources shaping social opportunities maintaining order and simply enabling life More than the silent stage on which other powers perform such networks represent the essence of the city They also form an important political project a politics of small interventions with large effects The increasing evidence for an Anthropocene bears out the way in which humanity has stamped its footprint on the planet by constructing urban forms that act as systems for directing life in ways that create both immense power and immense constraint
