Recent Progress in Adsorption and Ion Exchange Y. H. Ma, Joseph P. Ausikaitis, 1987 *Recent Progress in Adsorption and Ion Exchange*, 1987 *Recent Advances in Adsorption and Ion Exchange* Y. H. Ma, 1982 **Recent Progress in Desalination, Environmental and Marine Outfall Systems** Mahad Baawain, B.S. Choudri, Mushtaque Ahmed, Anton Purnama, 2015-08-31 This book collects current scientific information on advanced technologies and management practices associated with the desalination industry in the Middle East and elsewhere around the world. The book opens with an introductory chapter which briefly recounts the history of desalination and describes the current state of development in the field. Part I Desalination Systems includes ten chapters which describe a variety of techniques and designs intended not only to minimize the impact of desalination but also to save energy and use natural resources to maximize the output of integrated desalination systems. Among the highlights are a chapter on the use of ceramic membrane technology for sustainable oil water production, a case study on the use of solar heating systems in desalination technology in Oman, discussion of fouling and its effect on design and performance of desalination systems, a review of shore approaches and sea lines with case studies from Australia and Germany, and a discussion of the integration of desalination technology with renewable energy for climate change abatement in the Middle East and North Africa region. Part II Environmental Systems includes among others a chapter on regulating the use of water resources and desalination technology on a regional scale, reducing the carbon footprint of desalination with examples from Australia, a description of desalination for irrigation in the Souss Massa region in the south of Morocco, a study of the impact of the coastal intake environment on operating conditions of thermal desalination plants in the United Arab Emirates, a discussion of hydrodynamic and thermal dispersion modeling of the effluent in a coastal channel with a case study from Oman, and a mathematical model study of effluent disposal from a desalination plant in the marine environment at Tuticorin in India. The book aims to inspire developments in desalination technologies which are specifically aimed at reducing energy consumption and cost and minimizing environmental impact. Recent Advances in the Science and Technology of Zeolites and Related Materials, 2004-12-18 Recent Advances in the Science and Technology of Zeolites and Related Materials Recent Development on Material Science and Environmental Material Yu Cao, 2013-09-10 Selected peer reviewed papers from the 2013 International Conference on Application of Materials Science and Environmental Materials AMSEM 2013 July 5-7 2013 Zhangjia Jie China *Recent Advances in Separation Techniques III* Norman N. Li, 1986 *Recent Advances in Environmental Science from the Euro-Mediterranean and Surrounding Regions (3rd Edition)* Mohamed Ksibi, Abdelazim Negm, Olfa Hentati, Achraf Ghorbal, Arturo Sousa, Jesus Rodrigo-Comino, Sandeep Panda, José Lopes Velho, Ahmed M. El-Kenawy, Nicola Perilli, 2024-05-03 This edited book includes over one hundred and eighty short papers that were presented during the third edition of EMCEI which was held in Sousse, Tunisia, in June 2021. Nowadays, experts as well as most of the general public know that the

Mediterranean and surrounding regions are facing environmental degradation that is accelerating at an unprecedented rate. The main causes are the natural and human induced climate change increasing pollution urban growth and the overexploitation and unsustainable use of resources due to rapid population growth. The effects are seen in several indicators such as the warming more frequent extreme events severe droughts water shortages contraction of natural resources changes in land use and landscape deterioration decreasing agricultural yields biodiversity loss deterioration of the ecosystems corrosion of the natural coastal environment sea level rise and ocean acidification. In addition to these more recent issues the Mediterranean and surrounding region naturally experience a number of hazards such as floods droughts desertification fires catastrophic forest diebacks earthquakes and volcanic eruptions. By presenting a wide range of environmental topics and new findings relevant to a variety of problems in these regions this book appeals to anyone working in the subject area and especially students interested in learning more about new developments in environmental research initiatives in light of the worsening environmental degradation of the Mediterranean and surrounding areas making environmental and resource protection an increasingly important issue that impedes sustainable development and social well being. The book addresses emerging environmental issues along with new challenges by focusing on innovative approaches that contribute to achieving a sustainable environment in and around the Mediterranean Sea and by highlighting to decision makers from relevant sectors the environmental considerations that should be integrated into their own activities. *Tar*

Soon Min, Heri Septya Kusuma, Yogesh Chandra Sharma, 2024-12-26 The world's activated carbon market volume has increased rapidly in recent years due to environmental regulations. It is being used in a variety of fields including water treatment air purification and food processing. This volume in the Green Chemical Innovations and Sustainability Series studies the physical biological and chemical modification of activated carbon to enhance the adsorption performance. Recent experimental results indicating improved adsorption capacity are presented as well as novel applications using activated carbon. The authors focus on identifying potential precursors from agricultural waste municipal waste and industrial waste and investigate toxic pollutants. Features: Demonstrates how researchers can produce synthetic adsorbents activated carbon via agricultural waste industrial waste and household waste. Describes the actions of adsorption capacity or percentage removal with respect to factors affecting the adsorption process. Investigates activated carbon's removal efficiency of dyes organic compounds pharmaceutically active compounds heavy metals pesticides fungicides herbicides antibiotics and other toxic pollutants. Discusses the search for low cost adsorbents that can be produced by using agricultural wastes industrial wastes and natural materials. **Chemical Abstracts Service Source Index** American Chemical Society.
