Receptor Phosphorylation Virinder K. Moudgil, 2018-05-04 The following chapters comprise invited contributions from eminent scientists who are internationally recognized authorities on the subject The chapters have been written to provide the reader with adequate background necessary experimental details and discussion that is easy to comprehend The book has been organized into four different sections The introductory chapter is meant to briefly summarize the contributions of other authors and discuss phosphorylation of receptor systems not covered in the book in detail The chapters in the second section on protein kinases and phosphatases are quite fundamental to the process of phosphorylation and will aid the reader in appreciating the observations and discussions reported in other chapters The third and fourth sections present discussions on phosphorylation of various receptor systems which are involved in mediating actions of peptide amine and steroid hormones It is hoped that this book will serve as a valuable resource and will be useful to all workers and students in the area of receptor ligand interactions

Hormones Growth Factors & Oncogenes Enrique Pimentel, 1987-06-30 This text examines the hormones and peptide growth factors involved in the regulation of metabolism growth and differentiation in metazoan organisms and proto oncogene expression Investigates protein products of some proto oncogenes for involvement in the transductional and post transductional and mechanisms of hormones and peptide growth factors

Nuclear Receptors Didier Picard, 1999-07-08 The steroid nuclear receptor superfamily is a large and growing group of transcription factors that are studied by a large and varied number of basic and clinical researchers The first two chapters describe the evolutionary biology of the superfamily and explain how to clone and characterize new receptors Chapter 3 shows how to identify the ligands of novel receptors and chapter 4 explains the kinetic analysis of receptor interactions In chapter 5 the reader is guided through the functional characterization of coactivators using microinjection The next section covers receptor phosphorylation ligand regulated transcription and hormone resistance syndromes Chapter 9 describes the in vitro assembly of Hsp90 complexes and chapter 10 explains yeast as a model system for looking at receptor function The final chapter shows how heterologous proteins can be regulated by fusion to the hormone binding domain of a receptor Nuclear Receptors A Practical Approach is a comprehensive guide to studying members of the superfamily and will be invaluable to all researchers old and new

new material including completely new chapters illustrations and a CD ROM containing all the figures from the text More concise and manageable than the previous edition this book has been retooled to better serve its audience in the neuroscience and medical communities Key Features Logically organized into 7 sections with uniform editing of the content for a one voice feel throughout all 54 chapters Includes numerous text boxes with concise detailed descriptions of specific experiments disorders methodological approaches and concepts Well illustrated with over 850 full color figures also included on the accompanying CD ROM

Receptor and Ion-channel Trafficking Stephen John Moss, Jeremy Henley, 2002 A volume in the Molecular and Cellular Neurobiology series This book reviews the recent advances in our understanding of the molecular and cellular mechanisms that control the assembly transport targeting and anchoring of the protein complexes making up the most important ion channels and receptor families fundamental to synaptic function Improved understanding of these processes is expected to reveal novel therapeutic targets relevant to a range of disease states The first section of the book contains three chapters dealing with cation channels and provides an accessible succinct and comprehensive account of what is known about the structures and the assembly and targeting of these multimeric proteins The focus of the book then moves on to cover ligand gated ion channels with two chapters on acetylcholine receptors The final section of the book contains four chapters covering the excitatory and inhibitory amino acid receptors

Receptor and Ion Channel Trafficking provides an integrated overview of the significant recent advances in the field of molecular neurobiology and will be essential reading for all researchers in neuroscience neurobiology biochemistry cellular and molecular biology

Fundamental Neuroscience Michael J. Zigmond, 1999 Fundamental Neuroscience is a comprehensive textbook that seeks to define the full

scope of neuroscience Developed in accordance with results of extensive reviews by neuroscience instructors this premier textbook is divided into seven integrated sections Each section may be used for a specific course or the full text may be adopted to provide a broad based curriculum that will carry the student from molecular to cognitive neuroscience Cell Membranes E. Elson, W. Frazier, L. Glaser, 1987-12-31 This volume assembles reviews on topics in two major related areas One of these concerns the interactions of cells with substrata and with other cells which are mediated by the extracellular matrix and soluble molecules As described in this volume these interactions are responsible for controlling cell functions ranging from embryogenesis and neural development to blood clotting More over important properties of the extracellular matrix can be modulated by the interdependent actions of tumor cells and fibroblasts The other major area of interest concerns the response of cells to extracellular signals Recent work has begun to reveal how a remarkable diversity of cellular functions including neuronal proliferative membrane cytoskeletal and many other kinds of responses are elicited through the mediation of a relatively small and interdependent set of second messenger systems These include both changes in cytoplasmic ionic balances and activation of various kinds of protein kinases Both subjects are covered in this volume The two areas are linked by the common theme of cellular response to an external environment that is sensed through cellular interactions with informational molecules which are soluble agents as well as those that are components of insoluble matrices It is only recently that we have come to appreciate the complex interplay between the matrix surrounding a cell and the cell's response to hormones and growth factors Thus we have tried to select examples in which this type of extracellular integration may play a role
