Seagrass Ecosystems A Scientific Perspective:

Seagrass Ecosystems C. Peter McRoy, Carla Helfferich, 1977 Seagrasses: Biology, Ecology and Conservation Anthony W. D. Larkum, Robert J. Orth, Carlos Duarte, 2007-05-16 Seagrasses are unique plants the only group of flowering plants to recolonise the sea They occur on every continental margin except Antarctica and form ecosystems which have important roles in fisheries fish nursery grounds prawn fisheries habitat diversity and sediment stabilisation Over the last two decades there has been an explosion of research and information on all aspects of seagrass biology However the compilation of all this work into one book has not been attempted previously In this book experts in 26 areas of seagrass biology present their work in chapters which are state of the art and designed to be useful to students and researchers alike The book not only focuses on what has been discovered but what exciting areas are left to discover The book is divided into sections on taxonomy anatomy reproduction ecology physiology fisheries management conservation and landscape ecology It is destined to become the chosen text on seagrasses for any marine biology course **Sabkha Ecosystems** H.-J. Barth, Benno Böer, 2002-03-31 Contains 31 contributions presenting the results of recent decades research on the extensive intertidal and inland saline flats of the Arabian Gulf Region known colloquially as sabkhat Only relatively recently acknowledged to be valuable ecosystems with research development and conservation value sabkhat are thoroughly explored in this volume by biologists geologists archaeologists ecologists botanists zoologists and other researchers and scientists from many countries The volume s 31 contributions are organized into three sections distribution of sabkhat within the Arabian Peninsula and the adjacent countries 13 sabkha ecology 14 and sabkha land use and development 4 The book includes some fairly low key b w photographs charts and maps Annotation copyrighted by Book News Inc Portland OR Seagrass Ecosystems C. Peter McRoy, Carla Helfferich, 1977 **Red Sea** Alasdair J. Edwards, 2013-10-22 The Red Sea is a unique and fragile environment All but landlocked between Africa and Arabia its peculiar oceanographic conditions its geographical position and its geological history all conspire to make it particularly vulnerable to the side effects of human civilization In places it is already a key environment under threat What makes the Red Sea unique What are the threats to this environment Where should future research be directed These are just three of the major questions addressed by the scientists contributing to this book

Ecosystems Ronald Osinga, Bernadette Pogoda, Roberto Danovaro, Alison Debney, 2024-09-23 Human health and wellbeing cannot be sustained without proper ecosystem functioning and high biodiversity is essential to maintain such functioning Worldwide unsustainable exploitation of natural resources by a growing human population has imposed serious pressures on

ecosystem integrity To change the tide the United Nations declared the current decade as the UN Decade of Ecosystem Restoration with the aim of supporting and scaling up efforts to prevent halt and reverse the degradation of ecosystems worldwide Large scale active ecosystem restoration actions will be needed to achieve these ambitious aims Whereas methodologies for systemic restoration of terrestrial ecosystems have been established marine ecosystem restoration is still a young field of science although rapidly emerging This Research Topic proposal aims to provide a platform for the growing number of marine scientists involved in marine ecosystem restoration The Research Topic will focus on coastal ecosystems such as mangrove forests salt marshes seagrass beds kelp forests shellfish reefs and coral reefs but will also welcome studies on nearshore environments such as shelf seas Mediterranean coralligenous habitats and mesophotic reefs
