Generative and Transformational Techniques in Software Engineering II Ralf Lämmel, Joost Visser, João Saraiva, 2008-10-08 The second instance of the international summer school on Generative and Transformational Techniques in Software Engineering GTTSE 2007 was held in Braga Portugal during July 2-7 2007 This volume contains an augmented selection of the material presented at the school including full tutorials short tutorials and contributions to the participants workshop The GTTSE summer school series brings together PhD students lecturers technology presenters as well as other researchers and practitioners who are interested in the generation and the transformation of programs data models metamodels documentation and entire software systems This concerns many areas of software engineering software reverse and re engineering model driven engineering automated software engineering generic language technology to name a few These areas differ with regard to the specific sorts of metamodels or grammars schemas formats etc that underlie the involved artifacts and with regard to the specific techniques that are employed for the generation and the transformation of the artifacts The first instance of the school was held in 2005 and its proceedings appeared as volume 4143 in the LNCS series

Deep Learning Applications with Practical Measured Results in Electronics Industries Mong-Fong Horng, Hsu-Yang Kung, Chi-Hua Chen, Feng-Jang Hwang, 2020-05-22 This book collects 14 articles from the Special Issue entitled Deep Learning Applications with Practical Measured Results in Electronics Industries of Electronics Topics covered in this Issue include four main parts 1 environmental information analyses and predictions 2 unmanned aerial vehicle UAV and object tracking applications 3 measurement and denoising techniques and 4 recommendation systems and education systems These authors used and improved deep learning techniques e.g. ResNet deep residual network Faster RCNN faster regions with convolutional neural network LSTM long short term memory ConvLSTM convolutional LSTM GAN generative adversarial network etc to analyze and denoise measured data in a variety of applications and services e.g. wind speed prediction air quality prediction underground mine applications neural audio caption etc Several practical experiments were conducted and the results indicate that the performance of the presented deep learning methods is improved compared with the performance of conventional machine learning methods

The world according to zebrafish: How neural circuits generate behaviour Gonzalo G. De Polavieja, German Sumbre, 2014-11-07 Understanding how the brain functions is one of the most ambitious current scientific goals This challenge will only be accomplished by a multidisciplinary approach involving genetics molecular biology optics ethology neurobiology and mathematics and using tractable model systems The zebrafish larva is a transparent genetically tractable small vertebrate ideal for the combination state of the art imaging techniques e.g. two photon scanning microscopy single plane illumination microscopy spatial light modulator microscopy and lightfield microscopy bioluminescence and optogenetics to monitor and manipulate neuronal activity from single specific neurons up to the entire brain in an intact behaving organism Furthermore the zebrafish model offers large and increasing collection of

mutant and transgenic lines modelling human brain diseases With these advantages in hand the zebrafish larva became in the recent years a novel animal model to study neuronal circuits and behaviour taking us closer than ever before to understand how the brain controls behaviour
