Real Time Systems And Their Programming Languages:

Real-time Systems and Programming Languages Alan Burns, Andrew J. Wellings, 2009 The main focus of this book is on the different languages including Ada and Java used to program real time applications and the language constructs required

Real-time Systems and Programming Languages Alan Burns, Andrew J. Wellings, 2001 Introduction to real time systems Designing real time systems Programming in the small Programming in the large Reliability and fault tolerance Exceptions and exception handling Concurrent programming Shared variable based synchronization and communication Message based synchronization and communication Atomic actions concurrent processes and reliability Resource control Real time facilities Scheduling Distributed systems Low level programming The execution environment A case study in ada

Laplante, 2004-04-26 The leading guide to real time systems design revised and updated This third edition of Phillip Laplante's bestselling practical guide to building real time systems maintains its predecessors unique holistic systems based approach devised to help engineers write problem solving software Dr Laplante incorporates a survey of related technologies and their histories complete with time saving practical tips hands on instructions C code and insights into decreasing ramp up times Real Time Systems Design and Analysis Third Edition is essential for students and practicing software engineers who want improved designs faster computation and ultimate cost savings Chapters discuss hardware considerations and software requirements software systems design the software production process performance estimation and optimization and engineering considerations This new edition has been revised to include Up to date information on object oriented technologies for real time including object oriented analysis design and languages such as Java C and C++ Coverage of significant developments in the field such as New life cycle methodologies and advanced programming practices for real time including Agile methodologies Analysis techniques for commercial real time operating system technology Hardware advances including field programmable gate arrays and memory technology Deeper coverage of Scheduling and rate monotonic theories Synchronization and communication techniques Software testing and metrics Real Time Systems Design and Analysis Third Edition remains an unmatched resource for students and practicing software engineers who want improved designs faster computation and ultimate cost savings

Real-time Systems and Their Programming Languages Alan Burns, 1995 Real-time Systems and Their Programming Languages Alan G. Burns, Andy Wellings, 1996

Specification and Compositional Verification of Real-Time Systems Jozef Hooman, 1991-11-27 The research described in this monograph concerns the formal specification and compositional verification of real time systems A real time programming language is considered in which concurrent processes communicate by synchronous message passing along unidirectional channels To specify functional and timing properties of programs two formalisms are investigated one using a real time version of temporal logic called Metric Temporal Logic and another which is based on extended Hoare triples Metric Temporal Logic provides a concise notation to

express timing properties and to axiomatize the programming language whereas Hoare style formulae are especially convenient for the verification of sequential constructs For both approaches a compositional proof system has been formulated to verify that a program satisfies a specification To deduce timing properties of programs first maximal parallelism is assumed modeling the situation in which each process has its own processor Next this model is generalized to multiprogramming where several processes may share a processor and scheduling is based on priorities The proof systems are shown to be sound and relatively complete with respect to a denotational semantics of the programming language The theory is illustrated by an example of a watchdog timer

Prozeßrechnersysteme '91 Günter Hommel, 2013-03-07

Proceedings PEARL 90 — Workshop über Realzeitsysteme Wilfried Gerth, Per Baacke, 2013-03-08 Seit vielen Jahren sind Rechner bei der Automatisierung technischer Prozesse unverzichtlich Dabei reicht die Palette der eingesetzten Systeme von Kleinstsystemen auf einer Kreditkarte bis zu sehr teuren Multiprozessorarchitekturen Fast immer müssen die Rechnersysteme fähig sein auf spontane und ereignisse schnell zu reagieren oder eventuell gleichzeitig komplizierte zeitliche Steuerungsvorhaben einzuhalten Dieses Echtzeitverhalten ist zentrales Thema dieses Tagungsbandes Dabei werden sowohl theoretische Aspekte Methoden des Software Engineering technische Realisierungen als auch praktische Anwendungserfahrungen der Echtzeitprogrammierung behandelt

Constructing Predictable Real Time Systems Alexander D. Stoyenko, 1991-08-31 Vorwort In der Natur entwickelten sich die Echtzeitsysteme seit einigen 100 Millionen Jahren Tierische Nervensysteme haben zur Aufgabe auf die Nachrichten aus der Umwelt die Steuerungsbefehle an die aktiven Organe zu geben Dabei spielen zum Beispiel bedingte Reflexe eine wichtige Rolle Vielleicht kann man die Entstehung des Menschen etwa zu der Zeit ansetzen als sich allmählich entwickelndes Gehirn Gedanken entwickelte deren Bedeutung in vorausplanender Weise über die gerade vorliegende Situation hinausging Das führte schließlich unter anderem zum heutigen Wissenschaftler der seine Theorien und Systeme aufgrund langwieriger Überlegungen aufbaut Die Entwicklung der Computer ging im wesentlichen den umgekehrten Weg Zunächst diente sie nur der Durchführung starrer Programme wie z.B. das erste programmgesteuerte Rechengerat Z3 das der Unterzeichner im Jahre 1941 vorführen konnte Es folgte unter anderem ein Spezialgerät zur Flügelvermessung das man als den ersten Prozessrechner bezeichnen kann Es wurden etwa vierzig als Analog Digital Wandler arbeitende Messuhren vom Rechnerautomaten abgelesen und im Rahmen eines Programms als Variable verarbeitet Aber auch das erfolgte noch in starrer Reihenfolge Die echte Prozesssteuerung heute auch Echtzeitsysteme genannt erfordert aber ein Reagieren auf beständig wechselnde Situationen
