Cyber-Physical Systems: Modelling and Industrial Application Alla G. Kravets, Alexander A. Bolshakov, Maxim Shcherbakov, 2022-03-26 This book discusses the open questions regarding the modelling of cyber physical systems and their application in different industries The industry needs new approaches to improve its competitiveness The concept of cyber physical systems supports such changes with the need to find new modelling tools becoming a key challenge

The book contains five sections covering the following topics: cyber physical systems modelling, IoT and signal processing, cyber physical systems intelligent control, cyber physical systems industrial implementation, and the production of the new material for cyber physical systems. These approaches on the one hand should ensure the execution of current business processes and on the other hand ensure a quick speed of reactions to changes. The target audience of the book are practitioners, enterprises, representatives, scientists, PhD and Master students who perform scientific research on modelling and industrial application of cyber physical systems.

TRON Project 1987 Open-Architecture Computer Systems Ken Sakamura, 2012-12-06 Almost 4 years have elapsed since Dr Ken Sakamura of The University of Tokyo first proposed the TRON the realtime operating system nucleus concept and 18 months since the foundation of the TRON Association on 16 June 1986. Members of the Association from Japan and overseas currently exceed 80 corporations. The TRON concept as advocated by Dr Ken Sakamura is concerned with the problem of interaction between man and the computer, the man machine interface which had not previously been given a great deal of attention. Dr Sakamura has gone back to basics to create a new and complete cultural environment relative to computers and envisage a role for computers which will truly benefit mankind. This concept has indeed caused a stir in the computer field. The scope of the research work involved was initially regarded as being so extensive and diverse that the completion of activities was scheduled for the 1990s. However I am happy to note that the enthusiasm expressed by individuals and organizations both within and outside Japan has permitted acceleration of the research and development activities. It is to be hoped that the presentations of the Third TRON Project Symposium will further the progress toward the creation of a computer environment that will be compatible with the aspirations of mankind.

Modeling from Reality Katsushi Ikeuchi, Yoichi Sato, 2012-12-06 This book summarizes the results of our modeling from reality MFR project which took place over the last decade or so. The goal of this project is to develop techniques for modeling real objects and or environments into geometric and photometric models through computer vision techniques. By developing such techniques time consuming modeling process currently undertaken by human programmers can be semi automatically performed and as a result we can drastically shorten the developing time of such virtual reality systems, reduce their developing cost and widen their application areas. Originally we began to develop geometric modeling techniques that acquire shape information of objects environments for object recognition. Soon this effort evolved into an independent modeling project, virtual reality modeling with the inclusion of photometric modeling aspects that acquire appearance information such as color texture and smoothness. Over the course of this development it became apparent that environmental modeling techniques were necessary when applying our techniques to mixed realities that seamlessly combine generated virtual models with other real virtual images. The material in his book covers these aspects of development.
