Recent Trends In Mortality Analysis Studies In Population:

The Life Table Guillaume Wunsch, Michel Mouchart, Josianne Duchêne, 2002-07-31 This work covers various important issues in life table construction and use It includes a non technical overview compares various methods of decomposing the difference in life expectancies discusses the finding of suitable indicators and models and deals with age period and cohort effects in mortality

Formal Demography David P. Smith, 2013-11-11 This book is intended as a relatively nontechnical introduction to current demographic methods It has been several years in preparation beginning from occasional class handouts I wrote to elaborate on essential points of demographic methodology Its growth from scattered notes to an integrated text was a natural process if a gradual one The content of the book addresses three objectives first I have tried to avoid demographic methods that are now dated In some chapters that has meant concentrating on formulas most demographers recognize In the chapters on life tables it meant testing competing formulas on a variety of real and synthetic datasets and dropping or relegating to footnotes those that were least accurate Second I have attempted to give readers a sense of the limits of different formulas and methods I am a terse writer however and for the reader that means most sentences carry weight Chapters should be read attentively with careful regard to commentary as well as to formulas and examples Finally I have tried to make the principal methodologies of the book accessible by offering explanations for formulas that are not obvious by keeping examples to the forefront and by placing relatively specialized topics in chapter appendices
