Recent Progress In Mathematical Psychology:

Recent Progress in Mathematical Psychology Cornelia E. Dowling, Fred S. Roberts, Peter Theuns, 2014-03-05

Mathematical psychology is an interdisciplinary area of research in which methods of mathematics operations research and computer science in psychology are used. Now more than thirty years old, the field has continued to grow rapidly and has taken on a life of its own. This volume summarizes recent progress in mathematical psychology as seen by some of the leading figures in the field as well as some of its leading young researchers. The papers presented in this volume reflect the most important current directions of research in mathematical psychology. They cover topics in measurement, decision and choice, psychophysics and psychometrics, knowledge representation, neural nets and learning models and cognitive modeling. Some of the major ideas included are new applications of concepts of measurement theory to social phenomena, new directions in the theory of probabilistic choice, surprising results in nonlinear utility theory, applications of boolean methods in the theory of knowledge spaces, applications of neural net ideas to concept learning, developments in the theory of parallel processing, models of response time, new results in inhibition theory and new concepts about paired associate learning.

Recent Advances in Language, Communication, and Social Psychology Howard Giles, Robert N. St. Clair, 2018-10-26. Originally published in 1985. Detailed exploration of the dynamics of language within social psychology forms a social psychology of language which is distinct from other approaches. This volume presents some of the growing body of research in this area with many theoretical models and ideas. Chapters consider the relationship between language and social situations, looking at cognitive structures in how communication between individuals develops in childhood and beyond, how it defines social situations, influences others, expresses feelings and values, evokes social categorizations and how it can break down.

Measurement With Persons Birgitta Berglund, Giovanni B. Rossi, James T. Townsend, Leslie R. Pendrill, 2013-05-13

Measurements with persons are those in which human perception and interpretation are used for measuring complex holistic quantities and qualities which are perceived by the human brain and mind. Providing means for reproducible measurement of parameters such as pleasure and pain has important implications in evaluating all kind of products, services and conditions. This book inaugurates a new era for this subject, a multi and inter disciplinary volume in which world renowned scientists from the psychological, physical, biological and social sciences reach a common understanding of measurement theory and methods. In the first section, generic theoretical and methodological issues are treated, including the conceptual basis of measurement in the various fields involved, the development of formal representational and probabilistic theories, the approach to experimentation and the theories, models and methods for multidimensional problems. In the second section, several implementation areas are presented, including sound, visual, skin and odor perception, functional brain imaging, body language and emotions, and finally the use of measurements in decision making. *Measurement with Persons* will appeal to a
