Recent Trends In Molecular Recognition:

Recent Trends in Molecular Recognition F. Diederich, H. Künzer, 2013-04-17 Reasoning in terms of molecular recognition may be traced back to Emil Fischer who practiced the art of chemistry at Humboldt University in Prussian Berlin a century ago Today it is clearly recognized that molecular recognition impacts and determines all life processes It has become a key research field in both chemistry and biology and the emerging interface of what now is being called chemical biology The technological advances derived from this knowledge are particularly important diverse and directly evident in the pharmaceutical industry Under the auspices of the Ernst Schering Research Foundation a workshop held in Berlin in February 1998 addressed novel basic developments of potential relevance to drug research efforts A balance of timely research topics in molecular recognition is presented in the lectures delivered by a multidisciplinary international panel of renowned scholars and documented in this volume

RECENT TRENDS IN CHEMICAL SCIENCES AND ENVIRONMENTAL SCIENCE Dr. Azad Kumar, Dr. Rajesh Kumar Singh, Dr. Yashvant Rao, 2021-11-18 Our intention in publishing this book was to discuss and interpret all of the major issues in the chemical and environmental science disciplines because this book covers such a broad range of chemical and environmental science research area Rather we have selected the themes and challenges briefly defined them and demonstrated how they connect clarified the terminology and indicated where further research may be accessed We hope that the result is an excellent introduction to chemical and environmental science It is primarily aimed towards researchers in chemical science and related fields but it should be accessible to new researchers as well We have explored into more depth on issues that have received little attention elsewhere There are several useful sources for topics such as chemical science environmental science nanotechnology ionic liquids solid waste management photodegradation Nanomaterial adsorption of hazardous metals and conducting polymers However we attempted to provide up to current knowledge we are well aware that books may soon go out of date if they seek to provide too much detail so we concentrated on basic concepts that should not go out of fashion too quickly Our book differs somewhat from other texts in the chemical and environmental sciences in its concentration We have focused on ideas and theories because we feel that a solid grasp of them will be more useful in the long run than specifics of present systems services and approaches We've also highlighted the dimension since we feel it's critical to understand where the discipline and its components originated from and why some things are the way they are This approach is based on the research with several references provided at the end of each chapter for convenience Our intention is that the content of this book will be sufficient to provide a fundamental knowledge of the entire field and that readers will refer to the references for more information and examples of the parts of which they

are most interested The conclusion words and captions as well as the important references at the conclusion of each chapter are intended to present the main points in a factual way
