Breaking the Chains of Gravity Amy Shira Teitel,2015-10-22 The incredible story of spaceflight before the establishment of NASA NASA's history is a familiar story one that typically peaks with Neil Armstrong taking his small step on the Moon in 1969 But America's space agency wasn't created in a vacuum It was assembled from pre-existing parts drawing together some of the best minds the non-Soviet world had to offer In the 1930s rockets were all the rage in Germany the focus both of scientists hoping to fly into space and of the German armed forces looking to circumvent the restrictions of the Treaty of Versailles One of the key figures in this period was Wernher von Braun an engineer who designed the rockets that became the devastating V 2 As the war came to its chaotic conclusion von Braun escaped from the ruins of Nazi Germany and was taken to America where he began developing missiles for the US Army Meanwhile the US Air Force was looking ahead to a time when men would fly in space and test pilots like Neil Armstrong were flying cutting edge rocket powered aircraft in the thin upper atmosphere Breaking the Chains of Gravity tells the story of America's nascent space program its scientific advances its personalities and the rivalries it caused between the various arms of the US military At this point getting a man in space became a national imperative leading to the creation of the National Aeronautics and Space Administration otherwise known as NASA **Critical Issues in the History of Spaceflight** Stephen J. Dick,Steven J. Dick,Roger D. Launius,2006 In March 2005 the NASA History Division and the Division of Space History at the National Air and Space Museum brought together a distinguished group of scholars to consider the state of the discipline of space history This volume is a collection of essays based on those deliberations The meeting took place at a time of extraordinary transformation for NASA stemming from the new Vision of Space Exploration announced by President George W Bush in January 2004 to go to the Moon Mars and beyond This Vision in turn stemmed from a deep reevaluation of NASA's goals in the wake of the Space Shuttle Columbia accident and the recommendations of the Columbia Accident Investigation Board The new goals were seen as initiating a New Age of Exploration and were placed in the context of the importance of exploration and discovery to the American experiences Amazon

Dick,2018 **Twilight War** Mike Moore,2008-03-03 Considering the historical background of space militarization and providing an overview of the United States efforts to militarily dominate space since the dawn of the space age this book argues that America must either ensure that space related weapons are verifiably banned for all nations through an international treaty or definitively choose a policy of unilateral space dominance that may lead to an arms race in space and possibly to another cold war Through a careful discussion of the history of space programs their impact on past policies and events the tactical and strategic influence of space weapons on the engagement of war and the potential pitfalls of a dominance strategy this book concludes that unilateral military dominance of space by the United States would be a supreme mistake and that it would make Americans less secure **Encyclopedia of World War II** Alan Axelrod,2007 A reference to the ideological military political biographical and social topics surrounding World War II which is often considered the pivotal event of the twentieth century *Aviation News* ,2007-07 **Rocket Science** Alfred J. that ended with the death of its pilot the near disaster of the Apollo 11 moon landing the mysterious Russian space shuttle that flew only once and was then scrapped these are just some of the unbelievable tales that Pyle has found in once top secret documents as well as accounts that were simply lost for many decades These stories complimented by many rarely seen photos and illustrations tell of a time when nothing was too off the wall to be taken seriously and the race to the moon and the threat from the Soviet Union trumped all other considerations Readers will be fascinated amused and sometimes chilled
