

Food safety and sanitation

1

Cook

- Cook the food to the recommended internal temperature.

2

Clean

- Practice food hygiene (e.g. handwashing, not working when sick, wearing hair net, etc)
- Thoroughly clean and sanitize food contact surfaces and equipment before and after use.
- Only use the suggested level of cleaning and sanitizing solutions for kitchen surfaces.

3

Store

- Properly store foods inside a refrigerator. Follow the recommended fridge food safety layout.
- Maintain at least 40°F (4°F) during refrigeration and 0°F (-18°C) for freezing temperatures.
- Maintain a temperature of 135°F (57°C) for hot holding foods.
- Storage areas must always be clean.

4

Separate

- Use separate utensils and kitchen tools for preparing raw and ready-to-eat foods.
- Do not use a shared preparation table for raw and ready-to-eat foods.

Sanitation For The Food Preservation In:

Handbook of Food Preservation M. Shafiur Rahman, 2007-07-16 The processing of food is no longer simple or straightforward but is now a highly interdisciplinary science. A number of new techniques have developed to extend shelf life, minimize risk, protect the environment, and improve functional, sensory, and nutritional properties. The ever-increasing number of food products and preservation techniques create a need for a comprehensive text. *Food Preservation in Developing Countries: Challenges and Solutions* Mohammad U. H. Joardder, Mahadi Hasan Masud, 2019-04-23 This text identifies common mistakes and challenges in food preservation in developing countries, offering solutions which can play a significant role in reducing food waste in these countries. The book offers a critical analysis of current preservation techniques for fruits and vegetables, meat, fish, dairy, and grain, identifying key mistakes and challenges and proposing effective solutions. Feasibility tests for implementing these innovative approaches are also presented. A well-rounded study of the various causes of food waste in developing nations, this book plays a key role in bringing effective food preservation methods to the developing world. *Food Preservation in Developing Countries: Challenges and Solutions* studies common food preservation techniques for fruits and vegetables, fish, meat, dairy, and grains, pinpointing the areas where waste occurs due to transportation, contamination, and low quality post-processing. Innovative potential solutions are presented, including the feasibility of implementation of these advanced preservation techniques. The book takes a critical look at barriers to proper food preservation in these regions and offers practical solutions which can be implemented in a cost-effective and timely manner. With almost one-third of the world's food supply wasted each year and 13% of the world's inhabitants going hungry, this is an incredibly important and timely text.
