of thinking scientific and experiential bounded and nonbounded Different approaches to planning comprehensive rational analysis disjointed incrementalism and satisficing mixed scanning strategic decentralized contingency transactional and advocacy planning Global strategic tactical and project management levels of planning Needs assessment and participation of those who will be affected Quantitative and economic planning approaches Understanding basic ideology and assumptions Quantitative and economic approaches measurement pricing cost effectiveness and cost benefit analysis decision analysis When used as a text the first priority of this book is to give BSW and MSW students the training which they will need and want later in their careers This training is consistent with Council on Social Work Education's required BSW MSW foundation courses as well as advance practice courses in most programs When used as a guidebook for the many practitioners who have learned since graduation that they need more skill in setting and achieving policy agency and community goals than they learned in school Basic Social Policy and Planning can enhance the left brain in social workers who as a group tend to be stronger in the right brain direction with chapters that walk the reader step by step through a generic rational planning model and tell why whom when and how to involve others in planning Because the substance of the book is rooted in advance interdisciplinary planning theory and practice this book is just what the doctor ordered for a doctoral first course in policy and planning it provides the hard background in planning for professors of policy and macro practice It is also highly appropriate for new PhDs who are assigned to teach such courses with limited background with its chapters on foundations of policy and planning various approaches to planning and quantitative techniques related to costs benefits and uncertainties in planning
