Twitter as Data Zachary C. Steinert-Threlkeld, 2017-12-28 The rise of the internet and mobile telecommunications has created the possibility of using large datasets to understand behavior at unprecedented levels of temporal and geographic resolution Online social networks attract the most users though users of these new technologies provide their data through multiple sources e g call detail records blog posts web forums and content aggregation sites These data allow scholars to adjudicate between competing theories as well as develop new ones much as the microscope facilitated the development of the germ theory of disease Of those networks Twitter presents an ideal combination of size international reach and data accessibility that make it the preferred platform in academic studies Acquiring cleaning and analyzing these data however require new tools and processes This Element introduces these methods to social scientists and provides scripts and examples for downloading processing and analyzing Twitter data

Python for Finance Cookbook Eryk Lewinson, 2020-01-31 Solve common and not so common financial problems using Python libraries such as NumPy SciPy and pandas Key Features Use powerful Python libraries such as pandas NumPy and SciPy to analyze your financial data Explore unique recipes for financial data analysis and processing with Python Estimate popular financial models such as CAPM and GARCH using a problem solution approach Book Description Python is one of the most popular programming languages used in the financial industry with a huge set of accompanying libraries In this book you ll cover different ways of downloading financial data and preparing it for modeling You ll calculate popular indicators used in technical analysis such as Bollinger Bands MACD RSI and backtest automatic trading strategies Next you ll cover time series analysis and models such as

exponential smoothing ARIMA and GARCH including multivariate specifications before exploring the popular CAPM and the Fama French three factor model You ll then discover how to optimize asset allocation and use Monte Carlo simulations for tasks such as calculating the price of American options and estimating the Value at Risk VaR In later chapters you ll work through an entire data science project in the financial domain You ll also learn how to solve the credit card fraud and default problems using advanced classifiers such as random forest XGBoost LightGBM and stacked models You ll then be able to tune the hyperparameters of the models and handle class imbalance Finally you ll focus on learning how to use deep learning PyTorch for approaching financial tasks By the end of this book you ll have learned how to effectively analyze financial data using a recipe based approach What you will learnDownload and preprocess financial data from different sourcesBacktest the performance of automatic trading strategies in a real world settingEstimate financial econometrics models in Python and interpret their resultsUse Monte Carlo simulations for a variety of tasks such as derivatives valuation and risk assessmentImprove the performance of financial models with the latest Python librariesApply machine learning and deep learning techniques to solve different financial problemsUnderstand the different approaches used to model financial time series dataWho this book is for This book is for financial analysts data analysts and Python developers who want to learn how to implement a broad range of tasks in the finance domain Data scientists looking to devise intelligent financial strategies to perform efficient financial analysis will also find this book useful Working knowledge of the Python programming language is mandatory to grasp the concepts covered in the book effectively
