Memes Today Discount Same Day Delivery:

Federation over the Web Klaus P. Jantke, Aran Lunzer, Nicolas Spyrtos, Yuzuru Tanaka, 2006-01-19 The lives of people all around the world especially in industrialized nations continue to be changed by the presence and growth of the Internet Its influence is felt at scales ranging from private lifestyles to national economies boosting the pace at which modern information and communication technologies influence personal choices along with business processes and scientific endeavors In addition to its billions of HTML pages the Web can now be seen as an open repository of computing resources These resources provide access to computational services as well as data repositories through a rapidly growing variety of Web applications and Web services However people's usage of all these resources barely scratches the surface of the possibilities that such richness should offer One simple reason is that given the variety of information available and the rate at which it is being extended it is difficult to keep up with the range of resources relevant to one's interests Another reason is that resources are offered in a bewildering variety of formats and styles so that many resources effectively stand in isolation This is reminiscent of the challenge of enterprise application integration familiar to every large organization be it in commerce academia or government The challenge arises because of the accumulation of information and communication systems over decades typically without the technical provision or political will to make them work together Thus the exchange of data among those systems is difficult and expensive and the potential synergetic effects of combining them are never realized
