OpenMAX AL 1.1 Quick Reference Khronos Group, **Servlet & JSP: A Beginner's Tutorial** Budi

Kurniawan, 2016-05-02 Servlet and JavaServer Pages JSP are the underlying technologies for developing web applications in Java. They are essential for any programmer to master in order to effectively use frameworks such as JavaServer Faces, Struts 2 or Spring MVC. Covering Servlet 3.1 and JSP 2.3, this book explains the important programming concepts and design models in Java web development as well as related technologies and new features in the latest versions of Servlet and JSP. With comprehensive coverage and a lot of examples, this book is a guide to building real world applications. **Java**

Precisely, third edition Peter Sestoft, 2016-03-25 An updated concise reference for the Java programming language version 8.0 and essential parts of its class libraries, offering more detail than a standard textbook. The third edition of *Java Precisely* provides a concise description of the Java programming language version 8.0. It offers a quick reference for the reader who has already learned or is learning Java from a standard textbook and who wants to know the language in more detail. The book presents the entire Java programming language and essential parts of the class libraries: the collection classes, the input/output classes, the stream libraries, and Java 8's facilities for parallel programming and the functional interfaces used for that. Though written informally, the book describes the language in detail and offers many examples. For clarity, most of the general rules appear on left-hand pages with the relevant examples directly opposite on the right-hand pages. All examples are fragments of legal Java programs. The complete, ready-to-run example programs are available on the book's website. This third edition adds material about functional parallel processing of arrays, default and static methods on interfaces, a brief description of the memory model and visibility across concurrent threads, lambda expressions, method reference expressions, and the related functional interfaces and stream processing, including parallel programming and collectors.
