European policymakers now face a different type of gatekeeper This CERRE Tech Media Telecom report identifies the main competitive bottlenecks and discusses whether the key pillars of net neutrality regulation openness non discrimination and transparency should also apply to certain types of devices such as smartphones and laptops Assuming that smartphones are likely to be the first choice for consumers accessing the internet and that they are therefore a crucial element of the internet access value chain the authors of the CERRE report make concrete suggestions focusing on operating systems app stores and browsers Crucially the policy objective should be to enable consumers to bypass gatekeepers and access content via multiple channels but not neutrality in the narrow sense said Jan Kr mer co author of the report and CERRE Academic Co Director Non neutral conduct is important for innovation investment security and privacy In light of existing EU regulation specifically the Platform to Business P2B Regulation and the Digital Markets DMA and Digital Services DSA Acts the report makes a number of recommendations aiming to ensure openness non discrimination and transparency when accessing the internet on mobile devices More accessible and less discriminatory app stores As they represent a gateway for consumers to access other content and apps the authors Jan Kr mer and Richard Feasey make several policy recommendations for app stores that aim to strike a balance between mitigating the competitive gatekeeper advantage and maintaining the user convenience offered by pre installed apps These include Enabling alternative app stores to be easily installed on devices including by requiring the pre installed app stores to host rival app stores with independent payment systems Unbundling the dominant app store from other apps Banning self preferencing of apps in app stores or browsers Careful consideration of how the transparency and redress mechanisms for dominant app stores under P2B DMA and DSA obligations may interact when imposed concurrently In important areas including app stores and browsers our recommendations build upon but go further than the obligations under the P2B regulation and the foreseen obligations under the DMA and DSA Richard Feasey co author of the report and CERRE Senior Advisor Openness transparency and data portability for operating systems As third parties may face discriminatory access to operating system OS functionality or system resources as well as limited browser functionality on an OS CERRE makes four main suggestions to improve competition and choice Enabling side loading of apps in dominant operating systems such that consumers can install any lawful and safe app on their device More stringent user consent rules for pre installed apps to align them with the consent required for apps that are installed later the same access privileges for both pre installed and alternative apps and the possibility to truly de install pre installed apps Transparency obligations on interfaces APIs for third party app developer access to operating systems and minimum notice periods in case those interfaces are changed The right to data portability as well as codes of conduct and common interfaces for devices so that consumers can switch from one device operating system to another as smoothly as possible By intervening at the operating system and app discovery layer to ensure access to alternative content the Commission can foster fairer competition in the internet access value chain without hindering innovation investment and the European principles of

Development of a mobile application for carpooling the elderly Mohamed Lamine Fetni,2020-03-27 Bachelor Thesis from the year 2019 in the subject Computer Science Applied language English abstract This thesis proposes a platform to help improve elder s mobility through carpooling a way for car drivers to share their private vehicle with more elders in order to splitting and reducing costs Carpooling may be one of the best solutions when there is no other mean of transportation to a specific location but naturally it is not the only one Mobile applications take more and more part of everyone s lives different services for carpooling with different features begin to compete with existing transportation solutions Some people start to prefer using new carpooling services over the traditional services represented by taxi services GoRide aims to promote carpooling by targeting elders making it easier for them to adhere and use this system In general people have a hard time conciliating their schedules because of the way they move from one location to another And elders suffer from this the most especially here in Algeria since transportation between cities is not that great As students we think there should exist more suitable transportation solutions to places where transportation networks are short and cheap and helpful for elders By targeting elders people will more likely join the service since its users are primarily other people form the same environment To put the carpooling system in place we have designed and developed an Android mobile application with backend servers for users to access the carpooling service through their smartphones additionally the application involves some features that are critical to the service By using Android Development Tools and Libraries and efficient backend solutions we have managed to make the application simple but powerful as well which makes this application very useful for the young and the old to use Our app GoRide will be a unique carpooling application that would take benefits of the advantages of carpooling and try to improve and eliminate the disadvantages all while focusing on making it a good carpooling experience for elders The realization of our project will go through the conceptual phase and then development phase Since making a good application requires good planning first

Recommendersysteme in Software Shops für mobile Plattformen (SwSmP) Daniel Bialas, 2011-04-23 Masterarbeit aus dem Jahr 2011 im Fachbereich Informatik Wirtschaftsinformatik Note 1,3 Otto Friedrich Universität Bamberg Lehrstuhl für Angewandte Informatik Kooperative Systeme Sprache Deutsch Abstract Die fortschreitende Entwicklung von mobilen Endgeräten wie Personal Digital Assistants PDAs und Smartphones ermöglicht einen immer weiter gehenden Einsatz für Aufgaben im beruflichen und privaten Umfeld von Benutzern. Kleine Anwendungen für diese mobilen Endgeräte werden kurz auch als App bezeichnet und können über Software Shops der verschiedenen Plattformen einfach erworben, installiert und genutzt werden. Allerdings wird mittlerweile eine Vielzahl von Apps angeboten, so dass Benutzer Schwierigkeiten haben, eine in ihrer Situation empfehlenswerte App zu finden. Dazu können Recommendersysteme verwendet werden, was gerade in einem mobilen Umfeld sinnvoll erscheint. Dies liegt zum einen an den beschränkten Benutzerschnittstellen der Mobilgeräte. Benutzer können hier nicht leicht sehr viele Suchergebnisse auswerten, sondern die ersten Treffer einer Suche nach Anwendungen sollten empfehlenswerte Apps liefern. Zum anderen ist in einem mobilen Umfeld eine Anpassung an den aktuellen Kontext wie Ort und Zeit wichtig. In dieser Abschlussarbeit soll nun genauer untersucht werden, wie man ein kontextsensitives Recommendersystem für Software Shops für mobile Plattformen SwSmP konzipieren und umsetzen kann. Dazu sollen zunächst in einem Grundlagen-Teil existierende SwSmP in Frage kommende Kontextarten und grundlegende Recommenderalgorithmen betrachtet werden. Darauf aufbauend soll ein eigenes Konzept zur Empfehlung von Apps entwickelt werden. Neben Ort und Zeit erscheint auch eine Anpassung der Empfehlung an den aktuell verwendeten Endgerätetyp sinnvoll. Das entwickelte Konzept soll dann in einer prototypischen Implementierung zum Teil realisiert und z.B. in einer kleinen Benutzerstudie evaluiert werden. Der Schwerpunkt dabei liegt auf der mobilen Schnittstelle zum Recommendersystem.
