Cooperative Information Agents III Matthias Klusch, Onn M. Shehory, Gerhard Weiß, 1999-07-21 This book constitutes the refereed proceedings of the Third International Workshop on Cooperative Information Systems CIA 99 held in Uppsala Sweden in July August 1999 The 16 revised full papers presented were carefully reviewed and selected from a total of 46 submissions Also included are ten invited contributions by leading experts The volume is divided in sections on information discovery and management on the Internet information agents on the Internet prototypes systems and applications communication and collaboration mobile information agents rational information agents for electronic business service mediation and negotiation and adaptive personal assistance

Come, Let's Play David Harel, Rami Marelly, 2012-12-06 This book does not tell a story Instead it is about stories Or rather in technical terms it is about scenarios Scenarios of system behavior It concentrates on reactive systems be they software or hardware or combined computer embedded systems including distributed and real time systems We propose a different way to program such systems centered on inter object scenario based behavior The book describes a language two techniques and a supporting tool The language is a rather broad extension of live sequence charts LSCs the original version of which was proposed in 1998 by W Damm and the first listed author of this book The first of the two techniques called play in is a convenient way to play in scenario based behavior directly from the system's graphical user interface QUI The second technique play out makes it possible to execute or play out the behavior on the QUI as if it were programmed in a conventional intra object state based fashion All this is implemented in full in our tool the Play Engine The book can be viewed as offering improvements in some of the phases of known system development life cycles e g requirements capture and analysis prototyping and testing However there is a more radical way to view the book namely as proposing an alternative way to program reactivity which being based on inter object scenarios is a lot closer to how people think about systems and their behavior
