Malin Granath, 2016-08-30 Cities are facing many challenges challenges linked to world wide trends like urbanisation climate changes and globalisation In parallel to these trends we have seen a rapid digitalisation in and of different parts of society Cities and local governments have been appointed an important role in overcoming these world wide challenges and subsequently in policy practices digitalisation is perceived as an important dimension in delivering better and sustainable services to its citizens As a result the smart city has emerged as a concept and approach to contemporary urban planning and development There is still no common understanding of the concept and what components and dimensions it covers However in all definitions digitalisation constitutes one dimension but the role and function of it is still not clear In this study I have examined how different stakeholders talk about digitalisation in policy and planning practices of urban development The aim

has been to identify and analyse different repertoires of discourses on digitalisation to advance our knowledge on how goals related to the smart city and digitalisation are put into practice. The results are based on a qualitative and interpretative case study with a social constructionist approach. An analytical framework based on discourse analysis, stakeholder theory and new institutional theory has been constructed to analyse the case. Main results show that repertoires on digitalisation are limited in both policy and planning of urban development. In these practices digitalisation is primarily seen as a means or as a communication infrastructure in relation to two city services functions, i.e. services related to governance and to environment. Results also show that practices of urban planning and development are institutionalised where different stakeholders' salience and stakes in urban development and in digitalisation differ, but it is clear that digitalisation is a secondary issue. Implications of these results are that the taken-for-granted discourses in policy and planning practices of urban development limit both practice and research when developing a smart city. Stder st r inf r m nga utmaningar kopplat till v rldsomsppnande trender s som urbanisering, klimatf r ndringar och globalisering. Parallellt med dessa trender har vi sett en snabb digitalisering i och av olika delar av samh llet. I detta sammanhang har st der och kommuner blivit tilldelade en viktig roll i hanteringen av dessa utmaningar. P policyniv ses digitalisering som en viktig dimension f r att leverera h llbar och b ttre service till medborgarna. Som ett led i detta har smarta st der vuxit fram som b de begrepp och metod f r stadsplanering och stadsutveckling. Det finns dock ingen gemensam tolkning av begreppet. D remot finns digitalisering med som en dimension i definitionerna, men vilken roll och funktion den har r fortfarande oklart. I denna studie har jag unders kt hur olika intressenter talar om digitalisering i olika policy och planeringspraktiker kopplat till stadsutveckling. Syftet har varit att identifiera och analysera repertoarer av digitaliseringsdiskurser f r att bidra med kunskap om hur m l kopplade till smarta st der och digitalisering oms tts i praktiken. Resultaten r baserade p en kvalitativ och tolkande fallstudie med en socialkonstruktionistisk ansats. Ett analytiskt ramverk baserat p diskursanalys, intressentanalys och nyinstitutionell teori har tagits fram f r att analysera fallet. Resultaten visar att digitaliseringsrepertoarer r begr nsade b de i policy och i planering av stadsutveckling. I dessa praktiker ses digitalisering fr mst som ett verktyg eller en kommunikationsinfrastruktur i relation till tv samh llsfunktioner n mligen funktioner kopplade till styrning och administration och funktioner kopplade till milj. Resultaten visar ocks att praktiker kopplade till stadsplanering och stadsutveckling r institutionaliserade praktiker d r olika intressenter har olika makt legitimitet och angel genhet g llande stadsutveckling och digitalisering. Det r dock tydligt att digitalisering r en sekund r fr ga. Implikationerna av dessa resultat r att de f rgivettagna diskurserna begr nsar b de praktiken och forskningen i utvecklingen av smart st der.
