Several Complex Variables I Introduction To Complex Analysis Encyclopaedia Of Mathematical Sciences Vol 7:

Introduction to Complex Analysis E.M. Chirka, A.G. Vitushkin, P. Dolbeault, G.M. Khenkin, 1989-12-12 From the reviews In sum the volume under review is the first quarter of an important work that surveys an active branch of modern mathematics Some of the individual articles are reminiscent in style of the early volumes of the first Ergebnisse series and will probably prove to be equally useful as a reference for the appropriate reader they will be valuable sources of information about modern complex analysis Bulletin of the Am Math Society 1991 This remarkable book has a helpfully informal style abundant motivation outlined proofs followed by precise references and an extensive bibliography it will be an invaluable reference and a companion to modern courses on several complex variables ZAMP Zeitschrift f r Angewandte Mathematik und Physik 1990

Algebraic Geometry II I.R. Shafarevich, 1995-12-21 This two part volume contains numerous examples and insights on various topics The authors have taken pains to present the material rigorously and coherently This book will be immensely useful to mathematicians and graduate students working in algebraic geometry arithmetic algebraic geometry complex analysis and related fields

Dynamical Systems IX D.V. Anosov, 2013-03-14 This volume is devoted to the hyperbolic theory of dynamical systems DS that is the theory of smooth DS s with hyperbolic behaviour of the trajectories generally speaking not the individual trajectories but trajectories filling out more or less significant subsets in the phase space Hyperbolicity the property that under a small displacement of any of a trajectory consists in point of it to one side of the trajectory the change with time of the relative positions of the original and displaced points resulting from the action of the DS is reminiscent of the motion next to a saddle If there are sufficiently many such trajectories and the phase space is compact then although they tend to diverge from one another as it were they have nowhere to go and their behaviour acquires a complicated intricate character In the physical literature one often talks about chaos in such situations This type of behaviour would appear to be the opposite of the more customary and simple type of behaviour characterized by its own kind of stability and regularity of the motions these words are for the moment not being used as a strict terminology but rather as descriptive informal terms The ergodic properties of DS s with hyperbolic behaviour of trajectories Bunimovich et al 1985 have already been considered in Volume 2 of this series In this volume we therefore consider mainly the properties of a topological character see below 2 for further details

 in connection with the description of the frequencies of small vibrations of mechanical systems see Arnold et al 1985 When
 the vibrations of a string are considered there arises a simple eigenvalue problem for a differential operator In the case of a
 homogeneous string it suffices to use the classical theory 6 Preface of Fourier series **Algebraic Geometry IV** A.N.
 Parshin, I.R. Shafarevich, 1994-04-25 Two contributions on closely related subjects the theory of linear algebraic groups and
 invariant theory by well known experts in the fields The book will be very useful as a reference and research guide to
 graduate students and researchers in mathematics and theoretical physics **Anzeiger**, 1998-07 Partial Differential
Equations II Yu.V. Egorov, A.I. Komech, M.A. Shubin, 2013-12-01 This book the first printing of which was published as Volume
 31 of the Encyclopaedia of Mathematical Sciences contains a survey of the modern theory of general linear partial
 differential equations and a detailed review of equations with constant coefficients Readers will be interested in an
 introduction to microlocal analysis and its applications including singular integral operators pseudodifferential operators
 Fourier integral operators and wavefronts a survey of the most important results about the mixed problem for hyperbolic
 equations a review of asymptotic methods including short wave asymptotics the Maslov canonical operator and spectral
 asymptotics a detailed description of the applications of distribution theory to partial differential equations with constant
 coefficients including numerous interesting special topics **Dynamical Systems II** Ya.G. Sinai, 2013-11-11 Following the
 concept of the EMS series this volume sets out to familiarize the reader to the fundamental ideas and results of modern
 ergodic theory and to its applications to dynamical systems and statistical mechanics The exposition starts from the basic of
 the subject introducing ergodicity mixing and entropy Then the ergodic theory of smooth dynamical systems is presented
 hyperbolic theory billiards one dimensional systems and the elements of KAM theory Numerous examples are presented
 carefully along with the ideas underlying the most important results The last part of the book deals with the dynamical
 systems of statistical mechanics and in particular with various kinetic equations This book is compulsory reading for all
 mathematicians working in this field or wanting to learn about it **Several Complex Variables I** Anatolii Georgievich
 Vitushkin, 1990 *Partial Differential Equations VIII* M.A. Shubin, 2012-12-06 This volume of the EMS contains three articles
 on linear overdetermined systems of partial differential equations dissipative Schroedinger operators and index theorems
 Each article presents a comprehensive survey of its subject discussing fundamental results such as the construction of
 compatibility operators and complexes for elliptic parabolic and hyperbolic coercive problems the method of functional
 models and the Atiyah-Singer index theorem and its generalisations Both classical and recent results are explained in detail
