View-Dependent Character Animation Parag Chaudhuri, Prem Kalra, Subhashis Banerjee, 2007-09-24 Computer generated 3D animation has matured over the years into a complex art form Coordinating and presenting the character's movement in three dimensions to convey a specific idea to the audience requires artistic and technical skills and often a labourious iterative trial and error process to get it right Creating moving camera character animations in 3D is a multifaceted computer graphics and computer vision problem Warranting a formal representation of the moving camera and efficient algorithms to help author the multitude of character poses required for the animation It is also necessary to deal with issues pertaining to camera and character pose interpolation and visualization of the association between the two The solution to this problem has to be efficient and elegant from the perspective of a computer scientist and make sense and be intuitive to use This well researched book contains a large number of example animations to explain and illustrate this versatile technique

3D Video Laurent Lucas, Céline Loscos, Yannick Rémyon, 2013-12-04 While 3D vision has existed for many years the use of 3D cameras and video based modeling by the film industry has induced an explosion of interest for 3D acquisition technology 3D content and 3D displays As such 3D video has become one of the new technology trends of this century The chapters in this book cover a large spectrum of areas connected to 3D video which are presented both theoretically and technologically while taking into account both physiological and perceptual aspects Stepping away from traditional 3D vision the authors all currently involved in these areas provide the necessary elements for understanding the underlying computer based science of these technologies They consider applications and perspectives previously unexplored due to technological limitations This book guides the reader through the production process of 3D videos from acquisition through data treatment and representation to 3D diffusion Several types of camera systems are considered multiscopic or multiview which lead to different acquisition modeling and storage rendering solutions The application of these systems is also discussed to illustrate varying performance benefits making this book suitable for students academics and also those involved in the film industry

3D Videocommunication Oliver Schreier, Peter Kauff, Thomas Sikora, 2005-11-01 The migration of immersive media towards telecommunication applications is advancing rapidly Impressive progress in the field of media compression media representation and the larger and ever increasing bandwidth available to the customer will foster the introduction of these services in the future One of the key components for the envisioned applications is the development from two dimensional towards three dimensional audio visual communications With contributions from key experts in the field 3D Videocommunication provides a complete overview of existing systems and technologies in 3D video communications and provides guidance on future trends and research considers all aspects of the 3D videocommunication processing chain including video coding signal processing and computer graphics focuses on the current state of the art and

highlights the directions in which the technology is likely to move discusses in detail the relevance of 3D videocommunication for telepresence systems and immersive media and provides an exhaustive bibliography for further reading Researchers and students interested in the field of 3D audio visual communications will find 3D Videocommunication a valuable resource covering a broad overview of the current state of the art Practical engineers from industry will also find it a useful tool in envisioning and building innovative applications
